Now you can use your Electron computer with any standard printer using MUSHROOM's new printer and user-port interface.

Bring your Electron up to the same standard as the BBC Model B computer printer and user-port into which you can plug robot arms, joy sticks or any BBC user-port module.

On the whole range of MUSHROOM modules and interfaces, the Electron edge connector is extended to give you unrestricted compatibility with any other Electron interface.

All MUSHROOM interfaces can be used separately or can be combined into the unique MUSHROOM ELECTRO-RAK which is conveniently connected to the Acorn Electron by a short cable.

This greatly enhances the performance of the Electron and turns the system into a computer comparable with many larger mini systems and as you grow your computer can grow with you!

Electron Eddie-torial

ONE of the nice things about the Spring Electron & BBC Micro User Show in London was that I was able to meet lots of Electron users.

Of course I've got to know quite a few of you through the mail I get, but it's not the same as actually meeting people in the flesh and hearing first hand what you want from Electron User.

The questions I was asked about the Electron ranged from simple ones that even I could answer to amazingly difficult ones - which I directed to my colleagues on the technical advice stand.

I hadn't realised what a clever lot you are and how

The price of piracy

many of you cut your teeth on other micros.

The questions were fascinating and gave me lots of ideas for future issues of Electron User.

Among them all, though, one question stood out.

The questioner was a lady wearing an expensive-looking fur coat.

"How can you join two cassette recorders together?" she asked,

"Using leads", I replied helpfully, "but I can't see why anyone would do that. Unless it was to copy software, which is illegal".

The lady smiled even more sweetly and adjusted the dead animal round her shoulders.

"But everyone does it", she protested, "I'm just having a few problems".

I told her to ask everyone and moved on to the next question, seething.

How would you feel if someone asked your advice on how to be a better housebreaker or a nimbler pick-pocket?

And how do you think our well-off lady would feel if I asked her if she did

some shoplifting as well as ripping off software. No doubt she'd have been horrified.

"After all", she'd say, "copying tapes, ripping off software, it isn't stealing is it? Everyone does it".

The trouble is though, it is theft, and as companies whose products are regularly stolen try desperately to stay in business, it's putting up the price of software for everyone.

But then it's only the innocent who suffer, not the pirates who can afford fur coats. Pete Bibby

Telephonelink on way

ELECTRON owners who feel that they have been left out of the computer communications revolution need worry no longer.

When Minor Miracles of Ipswich finish development work on their RS232 interface, the Electron will soon be able to talk to other micros and even mainframe computers.

Standard on the BBC Micro but lacking on the Electron, the RS232 port is the normal method of getting information out of one micro and into another — usually over telephone lines by way of a booster device or modem.

The interface will be used to link the modem directly into the Electron via the expansion bus.

... and printer interface

THE July Electron and BBC Micro User Show will see the launch of a new printer interface for the Electron. It will be released by First Byte Computers of Derby, manufacturers of the joystick interface.

They claim it will be the cheapest on the market.

The interface will not require additional software to make it operational and will allow all the normal printing control codes.

Expansion unit arrives – and it's official!

AT long last the first official Acorn hardware expansion unit for the Electron has been released.

Known as the Plus 1, and retailing at £59.90, it promises to take the Electron into the realm of serious computing expanding its capabilities, allowing it to use a printer, joysticks and solid-state program cartridges.

The matching unit is firmly attached to the back of the Electron by means of two screws and the overall size of the combination is about that of the BBC Micro.

It needs no external power supply, drawing its power from the Electron's edge connec-

Two proportional joysticks can be used via an 8 bit, four channel A-to-D converter. This will enhance both games and educational software.

In its more serious role the Plus 1 also enables the Electron to drive a Centronics type printer, allowing it to produce hard copy of listings and perform as a word processor.

Joystick and printer interfaces are already available from other manufacturers. The most original and excit-

Plug-in ROMs cut waiting

ing feature of the Plus 1 is that it has two slots that allow the use of software cartridges.

When the cartridges are slotted in the program is immediately available, sparing Electron users the long wait while the cassette tape loads

The software will cover a wide range from games to educational programs, and from computer languages other than Basic to word processors.

Among the first six cartridge releases are four classic Acornsoft games — Snapper, Starship Command, Hopper and Countdown to Doom.

Educational software is represented by the Tree of Knowledge, while Lisp is available for those wishing to expand their range of languages.

The cartridge slots will also take hardware extension cartridges allowing further Electron expansion.

Acorn give the example of an RS423 serial interface for connection to serial printers, modems and other computers.

Further hardware extension cartridges are planned for the Plus 1, which Acorn sees as only the first in a series of Electron hardware expansion units.

July 1984 ELECTRON USER 7

Micros answer to road deaths

A CALL has gone out to the ever increasing army of computer whizz kids to come up with an electronic answer to help keep death off the roads.

They are being invited to take part in a major contest to write the best computer program for the Electron or BBC Micro on the theme of road safety.

Open to all schoolchildren in the Greater London area, the new contest is being sponsored by the publishers of the Electron User and The Micro User magazines.

Posters and copies of the rules have already been sent out to more than 2,000 primary and secondary schools, with disc drives being offered as prizes.

Judging and awards will take place at the Electron and BBC Micro User Show, to be held at Alexandra Palace from July 19 to 22.

The Royal Society for the Prevention of Accidents and the Metropolitan Police are backing the contest and will be involved in selecting the most original programs.

"We feel that road safety schemes in the past have tended to talk down to children", says Mike Cowley, a spokesman for Database Publications, organisers of the contest.

"The Green Cross

Code man and the squawking parrot are prime examples of the rather patronising approach of adults.

"Here then is an opportunity for children themselves to show what they can do by using their knowledge of the new technology to make a real impact on the road safety front".

Programs made easier

AMONG the flood of books that have been published for the Electron are three that should make life easier for those new to programming.

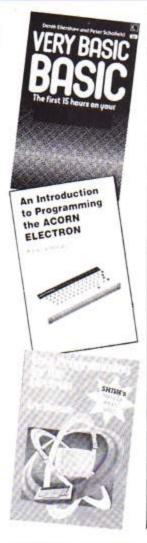

From Century Publishing comes "Very Basic Basic". Written by Derek Ellershaw and Peter Schofield, the book is designed to guide the new Electron user through the first few weeks of programming.

With a simple, nontechnical approach, it is aimed specifically at those who find even the User Guide difficult.

Along the same lines, but with an added foray into the world of interfacing, is "An Introduction to Programming the Acorn Electron".

Written by R.A. and J.W. Penfold and published by Bernard Babani, the book takes a practical, step-by-step approach to learning Electron Basic.

The last of the trio is "Easy Programming for the Electron", published by Shiva. The author, Eric Deeson, already well known for his books about the BBC Micro, starts at basics and instructs the beginner in a lighthearted but informative manner in the intricacies of the micro.

More joystick links released

HOT on the heels of its first two hardware addons for the Electron, a new peripheral has been released by Sir Computers of Cardiff.

Demand for their Electron Printer/ADC Interface and the ROM/ RAM Expansion Board has been so great the firm has been encouraged to add to its range of products.

The new peripheral is a combined Centronics printer and switched joystick interface. This differs from their previous joystick interface in that it allows the Electron to use two sets of switched joysticks.

Switched or Ataristyle joysticks differ from the analogue-to-digital joysticks available on the previous

interface. They are also more popular with games players.

"Basically we're doing what everyone else is doing", said Paul Kathro of Sir Computers, "but we're doing it properly".

The latest interface will hold its software in ROM, avoiding the need for a cassette tape to be loaded before the game is played. The ROM also contains a screen dump facility for Epson printers.

Sir claims that the new unit is compatible with every piece of Electron software available.

YET another joystick interface for the Electron is about to be launched as soon as sufficient quantities have been manufactured.

Produced by Wizard Development of Sheffield, it will allow two sets of switched joysticks to be used.

"Basically it's a little black box that sits on the back of the Electron and allows you to use two sets of switched, Ataristyle joysticks", according to a Wizard spokesman.

Said to be capable of handling any commercial game that uses joysticks, the interface has its software built into the hardware. This obviates the need for cassette based software to be run before the game is loaded.

The company intends to enter the Electron software market soon.

Expansion bus 'no weak link'

AN Acorn spokesman has quashed rumours concerning the robustness or otherwise of the Electron's expansion bus.

"Absolute rubbish" was his firm response to being told of reports that the bus could not withstand more than 100 connections and disconnections of peripherals.

A strong and reliable part of the Electron, the bus was certainly hardier than the reports made out.

However, like any other electrical circuit, it has to be treated with respect.

But the Acorn spokesman pointed out that the bus wasn't designed specifically for peripherals that were continually being attached and then taken off.

The concept was that the official Acorn product would be fitted to the Electron and not removed, further expansion units "piggybacking" on it. This would avoid any wear and tear of the expansion bus, he said.

o it alone SOLITAIRE is the Electron version of the age-old game of logic and patience. Run the program and your screen will display the solitaire board and its pegs. Just tell the Electron which peg you want to move - the instructions are in the game - and it will do it for you. It will also tell you if you try an illegal move. And if you decide you can't solve the puzzle, just press Escape and your micro will tell you how (X) ENTER you've performed. It's not hard to play but it is hard to solve. And you'll SOLITAIRE find it both amusing and addictive. Electron Solitaire will still be testing your brain long after you've grown tired of blasting aliens. Listing starts on Page 58

Take a break from zapping aliens with this timehonoured teaser from RUSSELL CARTWRIGHT

PRESS

ANY

And now FOR our THE last article in this **NEXT** trick.

series left you with a program to run and try and understand. All it did was to ask you to enter 10 numbers and the Electron then printed out their total.

There was nothing particularly original in it, but there were two new key words, FOR and NEXT.

This month we'll be taking a closer look at FOR and NEXT and seeing how they work in combination to form what's known as a FOR . . . NEXT

We'll be sampling just a part of the power released in our programs by using these FOR . . . NEXT loops and seeing how they work with the INPUT statement we talked about in the June issue of Electron User.

For the moment, however, let's have a look at how we would write a program which

would ask for 10 numbers, add them up and give us their total.

This would do the same job as Program VIII last month. But as we don't know what they are yet we'll have to do it without the FOR . . . NEXT loops.

Program I shows how it's

It makes a total of 23 lines in all. Notice the use of meaningful variable names like running_total and new_

These are deliberately written in lower case letters to make them stand out and also to stop them clashing with Basic key words which are always in capitals.

Incidentally, that's not a hyphen in the variable names punctuation marks aren't allowed. What looks like a hyphen is actually the underline mark which you'll find sharing the key with the downwards pointing arrow.

Take a look at Program I and see if you can spot a sort of common theme running through its lines.

You'll see that lines 30 and 40 and lines 50 and 60 are exactly the same, apart from their line numbers.

This isn't all that surprising when you consider they do the same things. Each pair of lines asks for a new number and then adds it to the running total.

In fact the same pair of lines, differing only in the line numbers, appear 10 times in the program.

I hope that you didn't type them all in separately but used the cursor keys and Copy to reproduce them easily.

You didn't? Well, you will next time.

Even so, having all those lines that are practically the same and do the same job must be a little inefficient, to say the least.

It would be nice if there were some way of just typing in the lines that do the work and telling the Electron to get on with it and obey them the required number of times.

Happily there is a way, in the form of a FOR . . . NEXT loop. This allows the Electron to perform the same lines over and over again a specified number of times. This is known as a loop.

The lines you want repeated come between the line with the FOR in it and the line with NEXT in it.

The FOR tells the Electron that it's come to the start of the lines that want repeating, the NEXT that it's come to the end of them. Figure I shows this diagramatically.

However, it's not quite that simple. We can't just use "a certain number of times" to tell the micro how often we want the enclosed lines to be repeated.

The Electron requires us to tell it how many repetitions we want in number form. This is so it can keep track of the number of loops by counting.

It's quite easy. All we do is set up a variable to keep track of things and tell the Electron the range that variable - the loop control variable, to be formal - will vary over.

Don't worry if that seems a bit odd. Just run Program II and it'll make sense.

> 10 REM PROGRAM II 20 FOR finger=1 TO 10 30 PRINT "Hello!" 40 NEXT finger

When the Electron obeys this program you get 10 "Hellos" on the screen. That's not too astounding - the interesting bit is the way it is

As you can see, line 30 is the one that PRINTs the message on the screen, and it does it not once, but 10 times.

This is because line 30 comes between the FOR of line 20 and the NEXT of line 40, which set up a loop that the micro performs over and over. But why 10 times?

The number of times that the Electron processes the loop is determined by the

- 10 REM PROGRAM I
- 20 LET running_total=0
- 30 INPUT "New number "new number
- 40 LET running_total=runni ng_total+new_number
- 50 INPUT "New number "new 60 LET running total=runni
- ng_total+new_number 70 INPUT "New number "new_
- number 80 LET running_total=runni
- ng_total+new_number 90 INPUT "New number "new
- 100 LET running total=runni
- ng_total+new_number 110 INPUT "New number "new_
- 120 LET running_total=runni ng_total+new_number

- 130 INPUT "New number "new number
- 140 LET running_total=runni ng_total+new_number
- 150 INPUT "New number "new_ number
- 160 LET running_total=runni ng_total+new_number
- 170 INPUT "New number "new_
- 180 LET running total=runni ng total+new number
- 190 INPUT "New number "new number
- 200 LET running total=runni ng total+new number
- 210 INPUT "New number "new 220 LET running_total=runni
- ng_total+new number 230 PRINT "The total is ";running_total

Program I

control variable finger.

After the FOR of line 20 we have "finger=1 TO 10". This tells the Electron to set up the variable finger and give it an initial value of one. It is then to perform all the lines that follow until it comes to a NEXT.

When it finds the NEXT, which marks the end of the lines to be repeated, the micro adds one to the loop control variable *finger* and goes back to the beginning of the loop and does it all over again.

Each time that the set of lines inside the FOR and the

NEXT is repeated the control variable *finger* has one added to it.

Eventually the control variable will reach the limit that's been set. This limit is the number that follows the TO in the line that starts the loop. In this case it is 10.

When finger equals 10, the Electron performs all the lines in the loop again – the tenth time.

It then comes to the NEXT which adds one to the value of finger. This is now 11, one

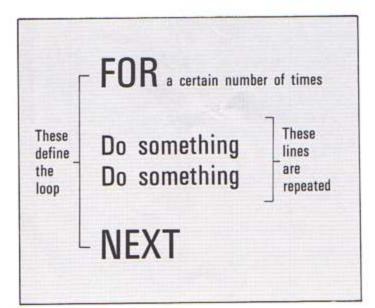

Figure 1: A FOR ... NEXT loop

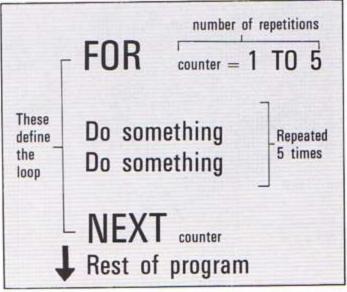

Figure II: Loop control variable

From Page 11

more than the upper limit of the control variable.

The Electron now stops going round the loop and carries on with the rest of the program – or would do if there were any more lines. This is shown in Figure II.

Really the Electron is just doing what we all do when we're repeating something several times. We count to keep track of where we are.

When our count reaches the number we wanted - the limit - we go off and do something else.

If you're as bad at maths as I am, you count on your fingers. Hence the name of the loop control variable in the previous program.

Before you run Program III, try and work out what it does and see if you're right.

10 REM PROGRAM III
20 FOR counter=1 TO 5
30 PRINT "Here we go again"
40 NEXT counter

What happens is that we get five "Here we go agains" on the screen. The loop is set up with the FOR in line 20.

This line also tells the Electron that it is to count from one to five using the control variable counter.

There's only one line between the FOR and the NEXT so that line 30 is repeated five times.

Each time round the loop, the loop variable counter is incremented by 1 and when it is over the limit – in this case 5 – the loop stops.

If you don't believe that the Electron increments the loop counter each time round, try adding a line like:

25 PRINT counter

to the program and you'll see it happening.

You'll have noticed that in both the previous programs the NEXT has been followed by the loop control variable. In the first case it was *finger*, in the second it was *counter*.

Strictly speaking you don't to have the loop control variable following the NEXT. The Electron doesn't need it there.

Having said that, I nearly

always put it in as in long, complicated programs, while the Electron may not lose track of which variable controls which loop, I do.

Program IV shows the NEXT on its own. The loop control variable is called *loop* and as it goes from 1 to 3 the message appears three times.

10 REM PROGRAM IV 20 FOR loop=1 TO 3 30 PRINT "Not again!" 40 NEXT

The numbers that we give the FOR to control the loop don't have to be positive. Take a look at Program V:

10 REM PROGRAM V
20 FOR control=-1
TO 2
30 PRINT "Yet again!"
40 NEXT control

Here the control variable, control ranges from minus one to two. As one is added to it each time round the loop, the message appears four times.

If you're puzzled as to why it's four messages and not three, remember that the control variable goes up by one each time round the loop.

This means that control will have the values -1, 0, 1 and 2. There are four values in all, hence the loop is performed four times and the four messages appear.

So, to recap, we've learnt the following five things about a FOR . . . NEXT loop:

- The lines that appear between a FOR and a NEXT are repeated over and over in what is known as a loop.
- The FOR marks the start of the loop. The lines that come after it are the ones that will be repeated.
- Also after the FOR comes the control variable and its range.
- The NEXT marks the end of the lines that are to be repeated and adds one to the control variable each time round the loop.
- The control variable keeps track of how many times the loop has been repeated.

One of the many powerful features of a FOR . . . NEXT loop is that we can use the control variable inside the lines that make up the loop as a kind of counter.

Program VI shows this happening:

10 REM PROGRAM VI 20 FOR number=1 TO 7 30 PRINT "This is pass number ";number 40 NEXT number

As you might expect by now, the program performs line 30 seven times. However the message each time is different.

This is because the last thing PRINTed by line 30 is the loop control variable number.

As this has increased by one each time round the loop – known as a pass – so the number at the end of the message changes. This can be a very useful programming tool.

Take a look at Program VII which displays the multiplication table for 10:

10 REM PROGRAM VII
20 FOR multiple=1
TO 12
30 PRINT ;multiple; " times
10 is ";multiple*10
40 NEXT multiple

Here the loop control variable multiple increases from 1 to 12 as the program goes round the loop. As multiple also appears in line 30, the line that is repeated by the loop, so the times table appears.

If you want to see how much work that simple use of a FOR... NEXT loop has saved you, try producing the 10 times table using only PRINT statements.

Program VIII shows a new aspect of FOR ... NEXT loops, combining them with an INPUT statement.

10 REM PROGRAM VIII
20 INPUT "What times table
do you want",table
30 FOR multiple=1
TO 12
40 PRINT ;multiple;" times
";table;" is ";multipl
e*table
50 NEXT multiple

It's more or less the same as the previous program, only the INPUT of line 20 allows you to choose whatever table you wish.

There are only five lines in

this program, one of which does nothing, but as you'll realise if you run it a few times, it's very powerful indeed.

FOR . . . NEXT loops, combined with INPUT statements can be the basis of some very effective programming techniques.

And now we come to Program IX, the problem program left over from June. If you've followed the above, you should be able to understand it.

It's a simple FOR ... NEXT loop that repeats the lines inside it 10 times. These repeated lines just ask you to input a number, held in the variable number, and add it to a running total held in total.

After 10 passes through the loop, the program then goes on to print out *total*, which is the sum of the numbers you've put in.

Simple isn't it? Anyway, it's certainly a lot easier than Program I.

And now you know so much about loops, try your hand at the following two programs. In Program X, why is the final value of loop 6 and not 5?

10 REM PROGRAM X
20 FOR loop=1 TO 5
30 PRINT "Pass number
";loop
40 NEXT loop
50 PRINT "Final loop is
";loop

And what's happening in Program XI?

> 10 REM PROGRAM XI 20 FOR loop=5 TO 1 30 PRINT "Something's wrong here!" 40 NEXT loop

I leave it up to you to find out.

FIRST BYTE ELECTRON JOYSTICK INTERFACE

ELECTRON JOYSTICK INTERFACE

Electron users! This is the add-on everyone wants, it's the new Electron switched joystick interface from First Byte available now with free conversion tape that vastly extends your game range right away.

The interface operates with all 'Atari-style' 9-pin joysticks, and its many advanced design features put it way out in front for quality and reliability. That's why, to date 15 major software houses are already bringing out games that work directly with the First Byte Electron Joystick Interface and many more are sure to follow.

FREE conversion tape - play all these top games right now

Every Electron Joystick Interface comes with a free conversion tape, so you can use some of the most popular games around right now:

- Cybertron Mission
 Cylon Attack
 Pengwyn

 The conversion tape also allows you to configure most other games for joystick control.

Games specially for the First Byte Interface

All these major software houses are bringing out games that work with the First Byte Electron Interface, with no conversion tape needed.

First Byte Computers,

A GENUINE FIRST BYTE

Here's something SPECIAL from

☐ Electron tape £5.95 ☐ BBC Micro tape £5.95 ☐ BBC Micro disc £7.95 (Please tick)

We've commissioned four rip-roaring games for the Electron and BBC Micro

Three of this highpowered collection
are top-rate machine-code
versions of arcade classics
and the fourth is a
thrilling real-time
adventure game.
There's hours of
enjoyment and something
to suit everyone in this
unique value for money
collection

SNAPMAN – Guide your man through the maze as he munches energy pellets and avoids hostile aliens

ALIEN INTRUDERS -

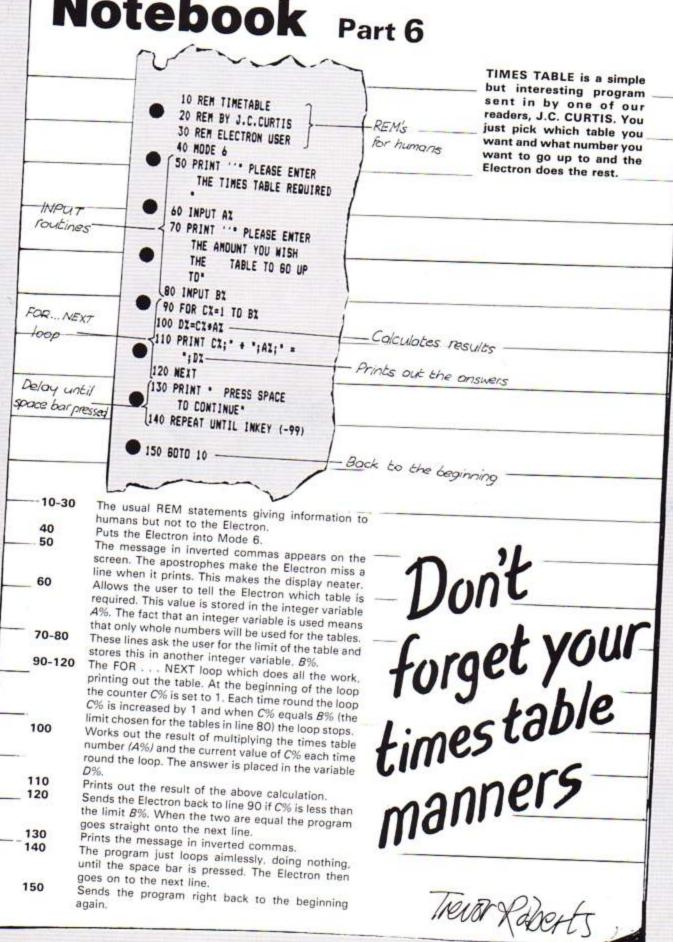

With only your laser for protection you must destroy the waves of aliens who threaten to engulf you

PANZER ATTACK – You are a tank commander engaged in vicious combat against encircling enemy forces

MAYDAY – A futuristic adventure! As captain of an interstellar cruiser you must guide the sole survivor of a stricken space freighter through the wreckage of his craft. If you fail to recover those vital medical supplies a whole planet is doomed!

Notebook Part 6

Now YOU can go for gold ... with the MICRO.

Fancy pitting yourself against the world's best at this summer's Olympics?

You can do so without going anywhere near Los Angeles — with the most challenging package of programs of 1984.

MICRO OLYMPICS is more than a game. It's a brilliantly written collection of ELEVEN track and field events.

And because we know we're going to sell many thousands of them we've brought the price right down — to just £5.95.

Ever imagined yourself as another Seb Coe? Then try to run against the world record holder at 1500 metres. And if that distance is too much for you then there's always the 100, 200, 400 and 800 metres to have a go at.

Not much good at running? Don't worry, MICRO OLYMPICS has many more challenges for you. Why not try your skill at the high jump or the long jump?

And if you can't beat the computer at running or jumping then you can always throw things around in frustration! The trouble is that it's just as hard to be a champion at the discus, the hammer or the javelin.

And the pole vault takes the event to new heights!

Yes, it's fast, furious fun, pitting yourself against the world's best times and distances on your micro.

You may not be another Steve Ovett or Alan Wells, but with practice you COULD become the Micro Olympics Champion!

This is a special joint offer from The Micro User and Electron User

LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH FOR BBC(32K) · ELECTRON SPECTRUM (48K)

As used in numerous schools and colleges these programs provide a highly successful aid to modern language learning. Each cassette contains a sophisticated control program and a comprehensive series of vocabulary lessons which can be used in a variety of self-paced learning and test modes. Words, phroses etc are displayed with all necessary accents and special characters, different colours are used for masculine, feminine and neuter words to assist gender learning.

The programs are suitable for beginners, 0-level and beyond as simple commands enable new lessons in vocabulary or grammar to be created by the user, edited as required, then permanently saved for later use. Invaluable for homework and exam revision!

Two cassettes are available for each language, together these contain a vocabulary of thousands of words; Level A provides 16 lessons in general subjects; Level B provides a further 16 lessons including adjectives, adverbs and fully conjugated verb lists

INCREDIBLE ANIMATION BROUGHT TO YOUR BASIC PROGRAMS

SIMONSOFT SPRITES VERSION TWO

@ £12.95 for the Electron

A 14-FOLD INCREASE IN SPEED (Electron) of your own character designs makes this the FASTEST EVER screen movement seen in Basic programs on the Electron. Amazing animation effects are available at a command, yet no knowledge of machine code is required. This incredible extension to your machine's facilities is RAM based and your whole program cna be SAVED/LOADED at the same time as the control coding and sprite images (your character designs). The designs and the control routine need take as little &600 (1.5K) from the memory space of your machine!

LOOK AT THESE FEATURES:

 SPRITE GENERATOR PROGRAMS to create your own sprite designs. All 16 colours may be used in each design, with characters as small as one pixel or as large as the 24 × 24 pixel SUPERSPRITE. As you design the sprites they are automatically stored in the machine code control routine so that you can delete the generator program before writing your own Basic.

UPTO 48 SPRITES ON SCREEN with 12 separate sprite designs, each with

3 independently controlled clones.

3. INSTANT ANIMATION with two images in each sprite design. These are switched automatically as the sprite crosses the screen, allowing effects such as hopping frogs, running men, etc.

COLLISION DETECTOR with a hit flag that is set to the number of any sprite overlapping with the sprite just moved. When the sprites move apart, there is no disruption of the sprite character designs.

ENLARGEMENT FACILITY of $\times 2$, $\times 3$, $\times 4$, $\times 5$ magnification of the normal sprite size! Let your invaders foom out of the screen in 3D effects - or use enlarged sprites throughout your program! FOUR PRESET FLIGHT PATHS designed from the generator programs. Each path has 8 definable directions, with up to 255 steps allowed in each direction. Once sprites have been allocated 7. Both EOR and TRANSFER plotting of sprites to the screen are available.

8. A SPRITE LIBRARY of sprite designs ready for use in your programs with 'books' such as 'GHOSTS' and 'MEN'

9. SPRITE POSITION COORDINATE VARIABLES which are reset automatically by the control coding. As you move your designs, the 'old' images left behind are deleted automatically as well.

This amazing package includes control routines containing different combinations of the above features - choose the routine best suited to the program you want to write. A comprehensive colour manual, an introduction program and two arcade style demonstration games are also included in the package. Compatibility with all other Electrons make our animation routines. ideal for serious programmers — and we won't claim royalties on programs you market that use sprites!

PROGRAMMERS – WE PAY 30% ROYALTIES FOR **EXCELLENT PROGRAMS**

Software Surgery

THE COLUMN THAT TAKES A LOOK INSIDE THE LATEST RELEASES

We are amused!

Royal Quiz Acornsoft/Ivan Berg Software

THERE are few subjects which crop up in conversation more than computers. But one that perhaps does appear just as regularly is royalty in all its forms — people have been fascinated by kings and queens for centuries.

Author Anthony Holden has collected a vast number of facts, both trivial and vital, about royal persons from earliest times to modern day.

These are presented as a series of 30 tests, grouped loosely by subjects as diverse as "The King's Musick" and "1066 and all that", and as intriguing as "The Bad..." and "Verse and Worse".

The difficulty of the questions varies a great deal, but I am sure very few people ANTHONY HOLDEN ON ANTHONY HOLDEN ON THE BECKETON ANTHONY HOLDEN ON THE BECKETON ANTHONY AND ACCOUNT HOLDEN ON THE BECKETON ANTHONY HOLDEN ON THE BECKETON AND THE BECKETO

would score highly at first.

It is possible to answer individually or to have two teams competing. One drawback, of course, is that by loading the data from cassette it is accessed serially. This can be frustrating.

An introductory passage introduces each test, after which the question is posed. The author's answer is then

shown so that marks may be awarded and entered.

This obviously is to prevent an answer such as "Duke of Edinburgh" being disallowed if the built-in answer was "Prince Philip".

I found this program quite fascinating, addictive and educational. It is also a welcome antidote to zapping aliens.

Phil Tayler

Adventure with a difference

Wheel of Fortune Epic Software

THIS is yet another superb adventure from Epic but one with a difference. For it includes multiple statement commands and characters you can talk to!

One day you find a wheel with the words Spin me and I'll tell you true, what the future holds for you written on the hub.

When you spin the wheel you lose consciousness and, on awakening, glimpse a beggar disappearing into the distance with the wheel clutched under his arm.

You soon realise you are in a new and mysterious world. Your task is to recover the wheel and use it to return to your own world. Of course, on the way you collect as much

Creepy - crawly capers

Bugs

Virgin Games

JUST when you thought it was safe to go out onto the lawn and sunbathe, along comes Bugs from Virgin Games.

All is not well in the garden. You are being overrun by an army of marauding bugs.

All you have to repel them with is your trusty bug-blasting spray can, your fast reactions and quick wits.

The bugs start at the top of the screen, slowly working their way nearer and nearer to where you are at the bottom. Don't concentrate on them too much or you'll miss the spider that bounces along, just waiting to gobble you up.

You can jump upwards or sideways to avoid it, but it's a persistent little beast – always there when you least expect it.

And that's not all. Watch out for the harmless looking little snail crossing the screen. He may look sweet but that trail he's laying can stop you hitting the other bugs.

Also the scorpion that crosses the screen leaves a trail of deadly stings waiting just for you.

The instructions, both on screen and on the pack, are clear and simple, as is the keyboard layout. The sound is very good and the graphics are excellent.

Fast, funny and addictive, it's a very good game for the younger Electron buffs. That's if their parents will let them have a go.

Bev Friend

From Page 19

treasure as you can carry.

You start your quest above ground where you discover some of the novel features of this adventure.

The characters you meet move completely – well almost completely – independently of you or your actions. You find that you can talk to them and sometimes even get a helpful reply!

A useful keyword not usually found in adventures is CONTINUE, abbreviated to C. This moves you as far as is possible in a given direction or repeats a given action. For instance, E, C. means East, Continue.

I considered the adventure to be harder than previous ones from Epic, though this could be because of the added difficulty brought in by having to talk to the characters and to time your moves to coincide with theirs (hint!).

I shan't give too much away though making peace with the beggar is an absolute must if you want to progress.

I must confess I haven't managed to get very far myself. So if you get a fair way through it, or even finish it, please send me some clues!

This is an exciting new adventure with some novel features. It's not for the novice but is excellent value for money for anyone else.

The definitive Electron adventure. Highly recommended.

Merlin

Voyage into the void

Vortex

Software Invasion

ONE of the good things about being a reviewer for *Electron User* is that you get to see and play a lot of the latest games.

The bad thing is that you have to take time off playing them in order to write the review!

It is particularly galling when the game is as good as Vortex, the new 3D space game from Software Invasion.

The program gives you command of five starfighters armed with the almost obligatory laser torpedoes.

Your mission is to enter the black void and hunt down the opposing aliens you find there. At the same time you're trying to survive and the trouble is that aliens aren't all you find in the void.

As you enter the vortex you are pulled forward faster and faster. The enemy craft come at you making you dodge and weave to avoid them.

When they're in range you can have a go at destroying them but they return the compliment, every hit lowering the strength of your shields.

Not that my shields ever ran

out. By then I'd usually crashed into one of my attackers!

And when you've run that gauntlet you meet the real guardians of the vortex, the asteroids that hurtle towards you.

Your weapons are no use in these asteroid storms – your only chance is to dodge. The longer you survive, the further into the void you go and the faster the asteroids come at you.

And if you manage to survive them there are more aliens waiting to take you on at the other side.

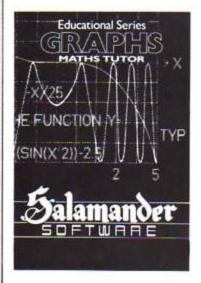

The speed has to be seen, or rather experienced, to be believed. You really do feel as though you are being drawn into the vortex, fighting for survival.

The graphics are excellent - though the sound could be better - and the instructions and keyboard use adequate.

A fast, captivating and amusing program, thoroughly recommended for lovers of action games.

Graham Parr

Plotting that learning curve

Graphs Maths Tutor Salamander Software

WHEN I was studying O and A level maths there was only one way to produce a graph of a function. That was to mark sufficient points to elicit the shape of the curve.

It was painstaking work and often inaccurate owing to the unsteadiness of my hand.

Micros have now brought about virtual accuracy to this work, but plotting and labelling axes or marking out a grid remains very time-consuming. This package, however, allows the function to be input, suitable axis limits to be applied and . . . there is your graph, perfectly drawn before your very eyes.

A quick plot feature is also available which uses preset values for the X and Y axes. This allows an approximation to be gained quite easily and quickly.

More advanced graphs make use of parametric expressions, with X and Y both being defined in terms of a third variable. This again is catered for, and the same range of options is available.

All through the most

instructive booklet there is a rich variety of suggestions and questions which will quickly make the potential of this program easily understood.

The second part of the tape provides testing in the shapes of curves, with a multiple-choice format. This again covers an extensive range including trigonometrical functions, straight line curves and quadratic and cubic equations.

Any student from O level to post A level will find this suite of programs an ideal complement to both private study and revision.

Phil Tayler

Use your Electron as a valuable tool for teaching

Happy Letters

Bourne Educational Software

ONE of the points made by many infant teachers about the use of micros is that the keyboard is composed of capital letters, while infant children are more familiar with lower case.

This program has gone a long way towards solving this problem by showing the relationship between the two systems.

It contains a suite of five options which cover matching and identifying letters, with a delightful screen presentation which appealed greatly to the children I tried it on.

Five letters are displayed on one side of the screen, each with a fish lying behind it. Another letter moves slowly down the other side of the screen, pausing next to each of the five.

When the two match, and if the child correctly signifies this by pressing the Return key, the little fish swims across and collects the pair of letters. Then it smiles and swims back to its place.

When the sequence of attempts is over, a beautifully drawn crocodile appears at the bottom of the screen.

Those fish whose answers were correct can swim away, but wrong answers are gobbled up to shrieks of delight. The child making a wrong answer is given another chance, so hopefully most of the fish escape.

The first three options cover matching either lower case letters. lower case words or matching upper/lower cases.

The remaining two options provide necessary practice in finding the letters on the keyboard - a major stumbling block even with 10 or 11 year

The time delay allowed by the program can be varied, so that the child can be tested against his previous results.

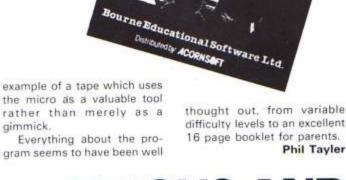

Monitoring the children's scores is done very well indeed. The adult can not only see the scores of each child. but also the incorrect responses made so that problems can be readily identified.

The program is a fine

gram seems to have been well

difficulty levels to an excellent 16 page booklet for parents.

IT'S FAST, FURIOUS AND COMPULSIVE! Electron Invaders Micro Power

IT'S amazing really. Only four years ago Space Invaders machines were the latest thing, original and compulsive.

I must have spent a fortune on them and still I never learnt how to get the mother ship without being hit myself.

Now, however, the alien invaders no longer hold sway.

Newer and more colourful arcade games have taken over my affections.

Or at least they had until I had a go at Micro Power's Electron Invaders and learnt that the game was as fascinating as ever.

From the moment the familiar rows of aliens started descending from the top of the screen showering destruction I was hooked again.

At first they looked slow. but that was my mistake. They're as fast as ever and seem to be a lot more cunning.

In an effort to avoid destruction I spent a long time cowering under the three silos, but even that was no use as the invaders have a new weapon.

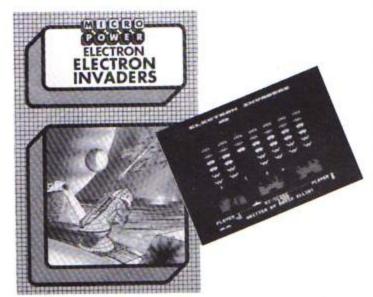

Not content with the usual rain of laser bolts they are dropping fragmentation bombs that can penetrate beneath your silo. This may not be cricket but it certainly adds a new dimension to the

The graphics are excellent, the sounds and instructions adequate and the game is as compulsive and frustrating as

If you are an arcade game freak and you're looking for a version of invaders for your Electron then you need look no

But watch out for those motherships - they're deadly.

PRINTERS

Now you can add a printer to your Electron, using Plus 1, we have selected four of the most popular dot-matrix printers. All allow you to condense or embolden text, offer high definition characters and allow you to produce clear-cut graphics and charts:

Brother HR5 (30cps)	£170.95
Brother EP22	£170.00
	£272.00
Epson RX80FT (incl. friction feed)	£315.00

For superb correspondence-quality printing you need a daisywheel printer. Our choice is one of our best-sellers, the Silver Reed EX43. It can also be used as a superior standalone electronic £394.25

(Without Electron interface: £286.90)

MONITORS

You can happily operate your Electron with your domestic TV set. But more and more users are finding that for a really crisp picture you need a special monitor. We offer a monochrome and three colour monitors:

Zenith 12" (green screen)	£81.00
Microvitec (14" colour - low res)	£217.41
Microvitec (14" colour-med res)	£326.66
Microvitec (14" colour - hi res)	£480.70

For the best of both worlds there is the 14" Nordmende, which can double as a monitor and normal TV, at a very attractive price £238.00 (with remote control £251.00)

DATARECORDER

recorders we recommend the Pye Data Cassette Recorder, which is a perfect match for the Electron. With it comes a FREE power pack and Electron lead.

£38.00

A FREE dust cover with every Electron

We have ample stocks of Electrons and can promise mainland delivery within 24 hours of receiving your order. With it comes an introductory cassette of 15 programs, a very comprehensive User Guide, an easy-to-understand DIY book on programming AND a free dust cover with the compliments of National Micro Centres£189.00

Electron Dust Cover if supplied separately

AT LAST! Plus 1 is the Electron add-on we've all been waiting for!

ELECTRON PLUS 1 is Acorn's answer to a growing demand from Electron users to be able to extend their micro's capabilities. With it you can add a printer and use your Electron for word processing and financial calculations. Its joystick input is designed to take two fully-proportioned joysticks - giving an entirely new dimension to games playing. And its two unique cartridge slots enable you to plug in games, educational and business programs - and that means no more waiting for programs to load. Many other manufacturers are now planning cartridges that will use Plus 1 to expand the Electron in many more exciting ways and considerably increase its power and versatility.

ELECTRON PLUS 1 is a must for every user who wants to really make the most of his micro.

HARDWARE REVIEW

WHETHER you bought your Electron for games, graphics, education or just the joys of programming, the fact is a joystick is an invaluable addition to your system.

Once you've used one you'll never want to be without it again.

The trouble is that the basic, unexpanded Electron doesn't support joysticks, so you first need an interface.

First Byte's joystick interface is one of several that have recently come onto the market.

A small beige coloured box that matches the Electron, the interface slots neatly onto the rear edge connector at the back of the computer.

It lies flush with the work surface, rendering it very secure. Because it doesn't interfere with the normal keyboard operation of the computer, it can be left connected at all times.

The manufacturers claim that the casing is specifically designed to protect the expansion bus connector. I'll take their word for it, as I can't think of any way of testing it without destroying my Electron! Certainly it looks sturdy enough.

Like the Signpoint Interface reviewed last month, it uses "Atari-style" switched 9 pin joysticks.

With the hardware comes a cassette-based program which allows you to convert most commercial programs for use with joysticks, although it should be pointed out this isn't a permanent change to the game.

Enterprisingly, First Byte has managed to persuade most of the leading software houses to support the inter-

Go faster with a joystick

face in its games software. This should mean few future compatibility problems.

The instructions supplied, although perhaps a little too brief, are well written and easy to understand, and tell you how to change your own masterpieces to joystick operation by means of the short program printed on the box.

Another advantage, although undocumented on the package, is that the Electron is able to read and respond to the joystick slightly faster than it is to the keyboard.

This has obvious advantages, especially for games programs.

A minor complaint is the positioning of the joystick socket on the far side of the unit.

This makes for some slight difficulty in inserting the joystick plug when the interface is in place, although the fact that such a minor point was noticeable says a lot for the overall satisfactory nature of the unit.

All in all, this is a splendid piece of equipment which I would not hesitate to recommend, despite the slightly high price of £25.

For your money you are getting a piece of hardware which is simple to use, easy to program, and which has endless possibilities beyond blasting aliens.

If you miss Mode 7's ability to produce double height characters take a tip from W. JOHN WOOLLARD and . . .

LET YOUR YEXT TEXT WALK

UNTIL the arrival of my Electron last November I was totally content with the Mode 7 of the school's BBC Micro for all my programs.

In my field of education teaching less able pupils — my programs were mainly based on reading and comprehension skills.

Mode 7 offered enough graphics to make the programs visually appealing. It also offered double height characters – a most important factor.

Unfortunately Acorn did not think Mode 7 to be as important and treasured as did many of its users. So those of us with Electrons are forced to solve the problems of writing text to double height in other modes.

We needed an easy to use procedure called by PROCdblp(x,y,aS) where x and y represent the TAB positions of the string to be printed in double height, and aS contains the string.

In Mode 7 the procedure was simply a single line as shown in Program I:

- 10 REM PROGRAM I
- 20 REM Double Height
- 30 MODE 7
- 40 PROCdblp(3,3,*Double Height Mode 7*)
- 50 END
- 60 DEF PROCHBID(x,y,a\$)
- 70 PRINT TAB(x,y)CHR\$ 141a \$TAB(x,y+1)CHR\$ 141a\$
- 80 ENDPROC

Program I

It's simple, but not available on the Electron.

The solution to printing in double height in the other modes is to print two characters, one above the other, which together form the complete letter/symbol.

Unfortunately in the text only modes, 3 and 6, there is a

space between each line of text that cannot be used. Those lines are immediately apparent if one changes the background logic colour using a line such as:

10 MODE6: VDU19,128,4,0,0,0.

In those two modes double height characters are not possible without an annoying gap between the upper and lower halves. However this still leaves us modes 0, 1, 2, 4 and 5.

The next stage is to discover a quick method of creating a single character to represent the top of a letter and a single character to represent the lower half of a letter.

The solution is found on Page 240 of the Electron User Guide. The OSWORD call with A% set to 10 reads character definitions and returns them to memory locations determined by the values of X% and Y%.

All characters are represented by an 8 × 8 matrix of pixels. This matrix is in turn represented by 8 bytes of data, one for the top line, one for the next, and so on to the bottom line.

For example the letter "a" CHR\$(97) is represented by 0.0,60,6,62,102,62,0. This should be familiar to anyone

who has read Casting Agency in Electron User.

This works out as shown in Figure 1:

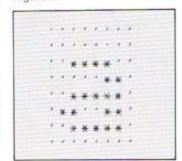

Figure 1

Any character can be redefined using VDU23. To define CHR\$(255) so that it appears as a letter "a" you use:

VDU 23,255,0,0,60, 6,62,102,62,0

where the final eight numbers are the matrix values starting at the top line.

Using OSWORD A%=10 and VDU23 together the following algorithm, of which Program II is the Basic version, was devised:

- Send the string to be printed.
- Take each character of the string in turn.
- Analyse the character matrix using OSWORD with

- 10 REM PROGRAM II
- 20 REM Double Height
- 30 MODE 1
- 40 PROCdblp(3,3,*ELECTRON USER*)
- 50 END
- 60 DEF PROCHBlp(x,y,a\$)
- 70 LOCAL K
- 80 FOR K=1TO LEN (a\$)
- 90 ?&70=ASC (MID\$(a\$
- 100 AX=10
- 110 XX=&70
- 110 A5-01
- 120 YX=0
- 130 CALL &FFF1
- 140 VDU 23,255,7&71.7&71 ,7&72,7&72,7&73,7&73 ,7&74,7&74
- 150 PRINT TAB(x+K,y) CHR\$ 255
- 160 VDU 23,255,7&75,7&75 ,7&76,7&76,7&77,7&77 ,7&78,7&7B
- 170 PRINT TAB(x+K,y+1) CHR\$ 255
- 180 NEXT
- 190 ENDPROC

Program II

A%=10.

 Set CHR\$(255) to represent the top half and PRINT.

From Page 29

- Set CHR\$(255) to represent the lower half and PRINT.
- Repeat for each character of the string.

Program II can then be reduced to VDU statements to save space, as shown in the subroutine must be initialised listing for Program III.

Alternatively, to save variable space and speed things up, the x and y can be made into integers x% and y% or resident integers such as M% and N%. However this means that the procedure cannot be reduced below two lines.

Program IV is a machine code version which runs considerably faster. The string is analysed in a similar way but a CALL statement is used to analyse each character and PRINT it on the screen.

The CALLed machine code at the start of the program.

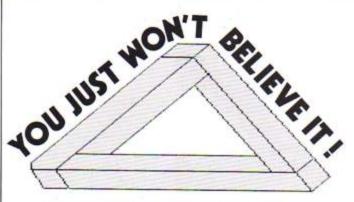

That need not be the end of the story. The procedure can be developed to include error trapping and extended to include triple and quadruple height characters.

Now let all your text walk

MORE than a year ago my school joined the hundreds of other primary schools who had already ordered a micro under the Department of Industry's Micros in Primary Schools scheme.

This gave a very limited choice, especially as the county suggested in the strongest terms that we should standardise on the BBC package.

We would have picked the BBC anyway, as it represented far better value for money than either the Research Machines micro or the Spectrum.

We waited (and waited) until the great day came and one of the staff went to collect the system.

The staff of 11 consisted of two with some experience of micros, and nine who had to be convinced that there was any place for the machine in their teaching.

We've had the system now for six months and the ratios have been exactly reversed.

Only two staff still hold reservations about their use of the micro, while the others vary from mildly to very enthusiastic.

This is obviously a very pleasing result, although it produces one major problem which must be repeated all over the country – one micro is almost worse than no micro at all

It is constantly in such demand that another micro is urgently required. Yet we are not alone in being unable to find the cost of another identical system.

Perhaps the Electron can offer a totally feasible alterna-

Classroom companions

Teacher PHIL TAYLER shows how the Electron is scoring top marks in the primary school

tive, as I hope to show.

I had used my own micros in the classroom for a while, having previously owned a Spectrum and an Oric. I was fortunate to track down an Electron in early December, and was struck with the dearth of software around.

So I investigated the BBC software to see what would actually work on the Electron.

With the BBC Micro came a suite of programs from the Microelectronics Education Programme, all written in Basic and all listable.

The snags were obvious, as much use was made of Mode 7 and its CHR\$ codes, but none was insurmountable.

Many merely call up colours of text or background, double height characters, etc. and this information can be gleaned easily from the BBC manual.

The average programmer can therefore modify the offending lines to produce an acceptable approximation or completely rewrite them.

One trickier problem is that Mode 7 supports all colours with 25 characters a line, while none of the Electron's modes offers an obvious equivalent. With all the programs converted where necessary we had two parallel systems which were very nearly equal.

Commercial software, however, has proved to be a rather different matter, especially where these are written in machine code.

There has been a welcome move recently towards more programs being made for the Electron or at least being made compatible with both the BBC and Electron.

It is to be hoped that compatibility will be maintained in the future, or perhaps software houses could produce versions for each micro, one on each side of the cassette.

How has the Electron fitted into my class, and others in the school?

Well, as can be seen from the accompanying photographs, it has proved most valuable.

We have, in Essex, a very positive view on the role of micros in primary schools. They should provide a stimulus to a child that the child cannot obtain in any better way.

This has led to a stimulating, open-ended approach to micros with young children, in which much use has been made of a cassette containing a subset of Logo.

Children can design their own patterns, shapes or figures and build them on screen, making any necessary modifications where appropriate.

Good programming habits were encouraged by the use of procedures, parameters and so on.

A snag from the children's point of view was the lack of colour facilities in the Logo tape, so after much thought, I let some of my more able pupils in on a little bit of Basic.

Having described the machine's graphics screen coordinates, I explained the MOVE and DRAW commands and their syntax.

When someone asked about a solid shape, I explained PLOT 85, and lastly the subject of graphical colours came up so I told them a little about GCOL.

The simple programs designed by the children showed flair and imagination.

There may be many teachers and others reading this whose hands are raised in horror at the prospect of primary children being given any information about Basic.

The truth is that many already know smatterings of Commodore or Sinclair Basic, so perhaps they should know what a well structured Basic looks like!

They were also given just enough information to complete a specific task. The level of discussion and enthusiasm was richly rewarding, and I feel the results more than justified the means.

With a bit of luck, one of the children will enquire about user-defined graphics and animation, which may well lead to another article for Electron User.

The Electron has proved itself to be a worthy complement to the BBC Micro, standing up to the robust treatment of five-to-eleven year olds with flying colours.

Its very similar keyboard has helped children to adapt, and the identical Basic has increased its application in the classroom.

Its smaller size has also been a useful feature, being much neater on the computer troller.

If software firms only appreciate its immense potential, and write compatible programs, then the Electron will surely become the standard choice for a second micro in schools.

The Electron has proved to be the ideal classroom companion for the BBC Micro

Tee-off for a day on the links, but be

FANCY a day on the links? You don't have to go further than your Electron with this version of Golf by ROLAND WADDILOVE.

See how many shots it takes you to get round the course. There are bunkers, lakes and lots of rough all waiting for you to tee off.

It's easy to play - all the instructions are in the game. You can go round the course by yourself or have up to four companions playing against you.

So type it in and drive off. But be prepared for a rough time if your game is under par.

PROCEDURES

Defines the characters used in the program, and the envelope used. Switches off the cursor keys, auto repeat and Escape. Redefines the Break key.

Prints the instructions and shows the characters used.

Turns off the cursor, defines a graphics window for the course and sets colours 9-13 to flashing black and white so the ball can be seen on any background. Inputs the number of players and sets up the arrays used. Calls PROCcourse to colour the course green, PROCtrees to draw the trees and PROCfairway to draw the fairway which is made up of small yellow triangles. There is a 1 in 5 chance of calling PROClake to draw a lake. Prints the hole and the flag.

Sets the start position() for all the players, that are not in the hole or in a hazard so hole()=FALSE, in-hazard()=FALSE. For each player PROCshot is called if not in the hole until all the players are in the hole.

Calls PROCinput-direction, PROCinput-distance, PROCcalculate-point to find where the ball lands and PROChit-ball to draw a line to the new position

Must be 1-8.

If in-hazard() then the distance is random up to what you type in.

PROCinstructions

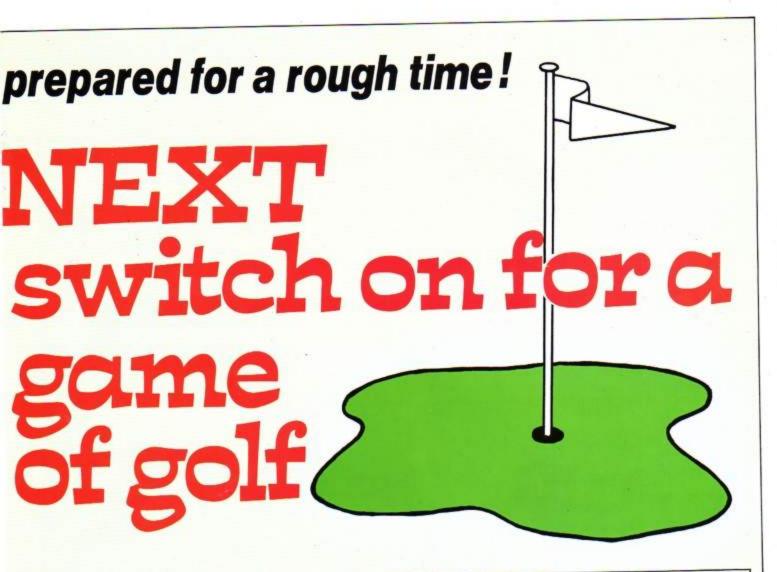

PROCset-variables

PROCdraw-hole

PROCplay-hole

PROCshot

PROCinput-direction PROCinput-distance

PROCcalculate-point

PROChit-ball

PROCscores PROCgame-over On direction% GOTO is used to select the correct calculation to work out the

ball's new position.

Draws a line to the new position and calls PROCcheck-position to find out where the ball has landed.

Prints out each player's score.

Restores the auto repeat, cursor keys

and Escape.

VARIABLES

players holed()

shots()

position()

in-hazard()

hole n,i,j x%,y%,nx%,ny%

direction% distance% lost-ball

Number of players.

Stores whether a player has holed his ball or not.

How many shots each player has made.

x,y coordinates of each player's

Stores whether a player is in a hazard or not.

Number of hole.

Used in loops. Temporary x,y coordinates of player's

position. Which way the ball is to be hit, 1-8

How far the ball is to be hit, 1-200 Whether a ball is lost or not.

IMPROVEMENTS/MODIFICATIONS

Alter the number of holes played, or add a new procedure PROCnumber-of-holes to ask how many holes you want to play. Ask whether you want to play again when the game is over. See whether you can print a flag next to each player's ball when it is his turn, to show where it is.

Make light work of listings

To save your fingers most of the listings in *Electron User* have been put on tape. Seven are now available – for the February, March, April, May, June and July issues, plus a bumper tape of all the programs from the first four introductory issues.

On the July tape:

GOLF A day on the links with your Electron. SOLITAIRE The classic solo logic game. TALL LETTERS Large characters made simple.

BANK ACCOUNT Keep track of your money. CHARTIST 3D graphs. FORMULAE Areas, volumes and angles. NOTEBOOK Time table.

On the June tape:

MONEY MAZE Avoid the ghosts to get the cash. CODE BREAKER A mastermind is needed to crack the code. ALIEN See little green men – the Electron way! SETUP Colour commands without tears. CRYSTALS Beautiful graphics. LASER SHOOT OUT An intergalactic shooting gallery. SMILER Have a nice day!

On the May tape:

RALLY DRIVER High speed car control. SPACE PODS More aliens to annihilate. CODER Secret messages made simple. FRUIT MACHINE Spin the wheels to win. CHASER Avoid your opponent to survive. TIC-TAC-TOE Electron noughts and crosses. ELECTRON DRAUGHTSMAN Create and save Electron masterpieces. SHEEP A program for insomniacs. MATHS HIKE Mental arithmetic. MESSAGE VDU commands in action.

On the April tape:

SPACEHIKE A hopping arcade classic. FRIEZE Electron wallpaper. PELICAN Cross roads safely. CHESSTIMER Clock your moves. ASTEROID Space is a minefield. LIMERICK Automatic rhymes. ROMAN Numbers in the ancient way. BUNNYBLITZ The Easter program. DOGDUCK The classic logic game.

On the March tape:

CHICKEN Let dangerous drivers test your nerve. COFFEE
A tantalising word game from Down Under. PARKY'S PERIL
Parky's lost in an invisible maze. REACTION TIMER How fast are
you? BRAINTEASER A puzzling program. COUNTER Mental
arithmetic can be fun! PAPER, SCISSORS, STONE Out-guess your
Electron. CHARACTER GENERATOR Create shapes with this
utility. FUNNY POLYGONS Fast graphics going round in circles.

On the February tape:

NUMBER BALANCE Test your powers of mental arithmetic.
CALCULATOR Make your Electron a calculator. DOILIES
Multi-coloured patterns galore. TOWERS OF HANOI The age old
puzzle. LUNAR LANDER Test your skill as an astronaut.
POSITRON INVADERS A version of the old arcade favourite.
MOON RESCUE Avoid the asteroids and save the spacemen.

On the introductory tape:

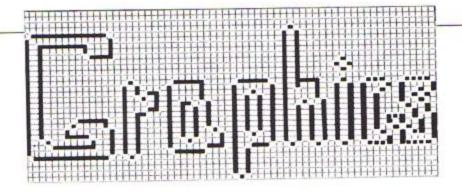

ANAGRAM Sort out the jumbled letters. DOODLE Multicoloured graphics. EUROMAP Test your geography. KALEIDOSCOPE Electron graphics run riot. CAPITALS New upper case letters. ROCKET, WHEEL, CANDLE Three fireworks programs. BOMBER Drop the bombs before you crash. DUCK Simple animation. METEORS Collisions in space. COMBINATIONS Crack the code. BUZZ WORD GENERATOR Let the Electron help you impress.

Please send me the following Electron User cassette tapes:

L		

UNLOCKING THE POWER OF THE GRAPHICS SCREEN

ALTHOUGH it only seems like yesterday when I started, this is the fifth article on graphics I've written for Electron User.

This month we'll be looking at the graphics screen proper and learning how to use three new commands – CLG, MOVE and DRAW.

Before we get down to them, I'd like to just look back over the subjects covered in the earlier articles, a sort of Story so far...

The first article, on Page 28 of the February Electron User, discussed the seven modes available on the Electron.

We saw that there was a trade off between the number of characters and lines on the screen, the number of colours and the amount of memory used.

For example Mode 6, a two colour mode which has 40 lines of 25 characters each, only uses 8k of memory.

Mode 3, which is exactly the same apart from the fact each line has 80 characters, takes up 16k.

MIKE MACMANUS introduces that elusive little invisible beastie, the graphics cursor

We then explored each of the modes and examined the way letters appeared in each

The article that appeared on Page 26 of the March issue took us into the world of computer colour.

We saw that each mode has what are known as default colours. These are the colours used when we enter that mode.

We also learnt how to use the COLOUR command with the logical colour numbers so we could have colours other than the default ones.

Modes 1 and 5 allow us four colours on the screen at once – one of them the background colour – while Mode 2 allow us an amazing 16 colours.

Of course the choice these

modes allow is reflected in the amount of memory used. Mode 2 is very colourful but it does use a lot of memory – leaving less available for our program – and tends to slow things down markedly.

April was a bleak month for Electron User as there was no article from me. Still the situation improved in the May issue where, on Page 23, I held forth on actual colour numbers which I called palette numbers and the colourful VDU19 statement.

We learnt how you could get any of the 16 available colours from the Electron's palette in any mode. The only restriction was on the total number of colours on the screen at any one time.

Mode 6 would only allow us two colours at once, though by using a crafty VDU19 we could have any of the 16 available.

We also had a look at the way VDU19 can work backwards in time, by changing colours that are already on the screen.

And May was the month that the elephants appeared!

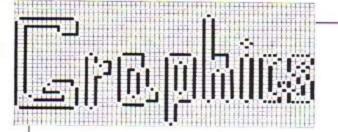

Page 19 of the June issue, along with an elephant, had us exploring VDU19 in more depth, showing how it could be used to brighten up text displays and even provide simple but effective animation.

As you can see, in just four articles we've come a long way and already your programs should be looking more colourful.

Now, however, I have a confession to make. Despite the fact that this is a series of articles allegedly about graphics, what we've covered so far isn't really graphics at all.

In fact all we've done is to talk about coloured letters and spaces.

What we've covered is

From Page 35

what is known as the text screen – so called because it deals with the way letters and words are displayed.

In this article we start our exploration of the graphics screen and the commands that allow you to unlock its power.

For the time being we'll be

content with saying that the graphics screen is exactly the same as the usual TV screen. We can, in fact, vary this but for now we'll just have the normal screen.

Where the graphics screen differs from the text screen we've used until now is the way it is divided up.

Take a look at Figure I. All it

shows is the normal Electron TV screen.

Notice, however, the numbers by its side. They vary from 0 at the bottom left of the screen to 1023 at the top left and 1279 at the bottom right.

You can imagine the whole range of integers from 0 to 1023 and 0 to 1279 ranged along the sides of the screen.

These are what are known as the graphics coordinates. You can use them to accurately pinpoint a position anywhere on the screen.

Figure II shows a point which is roughly in the middle of the screen.

The graphics coordinates for this point are 640,512.

You find the point by going along the bottom of the screen – known as the X axis – until you come to the number 640. Then you go straight upwards until you get to the point that is level with position 512 on the Y axis – the one that goes upwards.

Figure III shows two more points along with their graphics coordinates. You'll notice that the coordinates that position a point are always shown in the form X,Y.

X is the distance the point lies along the X axis while Y, not surprisingly, is the distance along the Y axis.

Now we have a method of locating all the points on the screen what do we do with them?

The answer is we do graphics – and lots of them.

Using the coordinate system and the graphics screen we can unleash all of the Electron's colour graphics power.

However, we have to learn to walk before we can run, so let's start by learning how to draw straight lines.

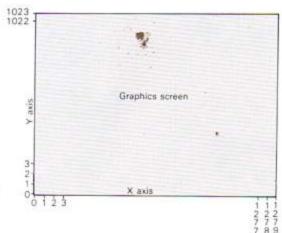

Unless things have changed a lot since I went to school a straight line is defined as the shortest distance between two points.

You get a straight line on an Electron by giving the micro the coordinates of the two points you want the straight line to join and telling it to get on with it.

The two commands that allow you to do this are the MOVE statement and the DRAW statement. These work on a strange little beastie called the graphics cursor.

We've come across a cursor before. It's that annoying flashing white line which shows where the next letter is going to appear on the screen.

This flashing cursor is the

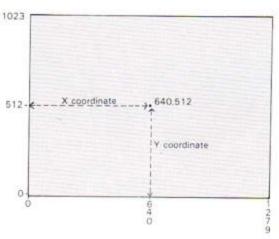

Figure 1:

Graphics

coordinates

screen

Figure II: Coordinates in action

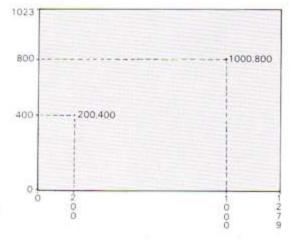

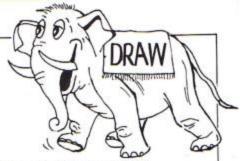

Figure III: More coordinates at work

text cursor, so called because it shows you where the text is going to appear in response to a PRINT or INPUT statement.

The graphics cursor is a different thing altogether. For a start you can't see it, you just have to imagine it.

Also it responds to the graphics commands such as DRAW. And finally it can be located at any one of the 1024 by 1280 locations on the graphics screen.

This makes it a much finer drawing instrument than the text cursor which is restricted to moving along lines and character spaces under the control of the TAB statement.

Don't worry too much about the difference between the two cursors. After a little practice it will become obvious.

I just think of it as the point of a coloured pencil resting on the screen.

Let's get on with drawing the straight line I promised. To do this we just put the Electron in one of the five graphics modes - 0, 1, 2, 4 or 5. Then enter:

DRAW 600,500

and press Return.

This results in a line from the bottom left of the screen to a point near the centre of the screen. This point lies 600 along the X axis and 500 up the Y axis.

But why does the line start at the bottom left of the screen, at the point defined as 0.0 in our coordinate system? Because of the way that DRAW works.

It tells the Electron to draw a line from the last set of coordinates that it used to the point whose coordinates follow the DRAW command.

In the case of:

DRAW 600,500

the Electron hadn't used a set of coordinates previously. In this case it just assumes the previous coordinates were 0.0 and DRAWs the line to 600,500.

Or you could say that the graphics cursor starts at 0.0 and the DRAW command moves it to 600,500, leaving a straight line on the way. Now you can see why I think of the graphics cursor as the tip of a pencil.

Now enter:

DRAW 800,700

and see what happens. Do you understand why?

What happened is that:

DRAW 800,700

has told the Electron to draw a straight line to 800,700 from the last point mentioned. This was 600,500, so the line joins & the MOVE command. the two points.

Have a go yourself, using DRAW to create straight lines on the screen. When you get fed up just use CLG to clear the -screen.

No. not CLS - that clears the text screen. Use CLG which clears the graphics screen.

At the moment the two coincide so both work equally well, but CLG is the command that specifically erases graphics.

Don't worry if you don't follow that just yet. You will when we come to graphics windows

You'll notice that so far all the lines we've drawn have been joined together - the last point of one line becomes the first point of the next.

This is all right for doodling but, as you'll find if you try to draw a picture, there are times when you don't want the lines to join up.

You want to give the DRAW command a new starting point. Can you do this?

The answer is that you can, using the MOVE command.

Suppose you have just started up your Electron and you wanted to draw a line from, say, 100,100 to 600,600.

Although you might expect:

DRAW 100,100

followed by:

DRAW 600,600

to do the job, it won't, as you get two lines.

The first, from screen coordinates 0.0 to 100,100, is the one that you don't want. The second, from 100,100 to

600,600, is the one you do

The Electron has taken the first point as 0,0 and worked from there. What's happened is that:

DRAW 100,100

tells it to join the point 100,100 to the previous point and hence the unwanted line.

What we should do is to move the graphics cursor to the point where we want the line to start. We do this using

So, to get the line from 100,100 to 600,600 we just use:

MOVE 100,100

to move the graphics cursor to 100,100 without drawing a line. Then we just use:

DRAW 600,600

as normal to join 600,600 to the previous point - which we've set up with the MOVE.

Try it for yourself, combining DRAW and MOVE to put lines on the screen. After a few minutes you'll find drawing lines on the Electron becomes second nature.

Try writing a few programs using MOVE and DRAW. Program I shows how it's done.

> 10 REM PROGRAM I 20 MODE 1 30 MOVE 500,500 40 DRAW 800,800 50 DRAW 600,300 60 DRAW 500.500

All this does is draw a triangle on the screen. Line 30 MOVEs the graphics cursor to the starting point, the three DRAW commands producing the lines.

Program II goes on to draw

10 REM PROGRAM II 20 MODE 1 30 MOVE 400,800 40 DRAW 800,800 50 DRAW 800,400 60 DRAW 400,400 70 DRAW 400,800

a quadrilateral on the screen, using four DRAW commands to produce the sides.

Program III draws the same shape as Program II but puts the coordinates for the corners of the figure in the DATA statements of lines 80 and 90.

10 REM PROGRAM III 20 MODE 1 30 MOVE 400,800 40 REPEAT 50 READ X.Y 60 DRAW X.Y 70 UNTIL X=400 AND Y=800 80 DATA 800,800,800,400 90 DATA 400,400,400,800

While it doesn't save much time or memory space in this example, READing coordinates from DATA statements is the best way of producing complicated drawings.

And talking of drawings, let's end with Program IV which draws a ... well, I'll leave it for you to find out. They get everywhere, don't theyl

10 REM PROGRAM IV 20 MODE 1 30 MBVE 450,200 40 REPEAT 50 READ X.Y 60 DRAW X.Y 70 UNTIL X=450 AND Y=350 80 DATA 400,200,300,300 90 DATA 200,200,150,100 100 DATA 100,100,150,250 110 DATA 250,400,400,550 120 DATA 500,450,575,475 130 DATA 575,250,450,350 140 PRINTTAB(11,19)"+" 150 VDU 23.1.0:0:0:0: 160 REPEAT UNTIL FALSE

And that's it for this month. Next time we'll be moving on to drawing coloured lines and graphics windows.

In the meantime I'll leave you with a couple of questions.

Why do the same lines, drawn with the same coordinates, look different in the different graphics modes?

And suppose we give a DRAW command a coordinate such as 1400,1400. As you'll see from Figure I, this is outside the graphics screen. What happens?

WHAT RESOLUTION FOR ONLY £230.

Our RGB high resolution colour monitors $(580 \times 470 \text{ pixels})$ sell for £229.95 (excluding VAT)—a saving of over £100 compared to other leading monitors of similar specifications.

That's a bargain we guarantee you won't see from

any other micro retailer.

We've managed to acquire the sole distribution rights enabling us to offer these superb monitors at this unbeatable price.

And just because you're saving on price doesn't mean you're sacrificing quality. Here's what Personal Computer News had to say about our monitors.

"There is no doubt that the JVC range of ECM colour monitors is excellent value for money...there is no loss in quality of picture after long periods...remember as more and more resolution is available with new micros, the need for a better display will be that much greater."

For those who only require medium resolution we also have a model (370 × 470 pixels) at £179.95 (excluding VAT) which is equally excellent value for money.

Both units have a 14" screen and are suitable for the BBC Micro, Sinclair QL, Lynx, Oric, Apple, IBM, the

Plot away to MINION STATES A Joystick interface

TIRED of using your Electron's keyboard to play games? Worried about the effect all your pounding is having on your poor little micro?

Well why not have a go at our free competition? You could win yourself a high quality joystick interface from First Byte Computers.

We're giving away two of them, and the contest couldn't be simpler to enter.

Take a look at the Mike MacManus graphics article in this month's issue and see how he uses the Electron to draw a picture of an elephant.

All you have to do is use the same technique to create your own Electron masterpiece. The catch is that you're only allowed to use up to 20 sets of coordinates in the DATA statements, so you'll have to be clever as well as artistic.

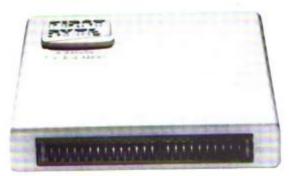

When you think you've got a winning picture, write down the coordinates of its points on the coupon below, and send us a sketch of your Electron drawing.

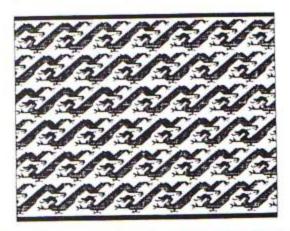

Remember, you can only use 20 points, one after the other.

Entries have to be received by July 31 1984 and the judge's decision will be final.

The two most original, artistic and amusing entries will win the First Byte interfaces.

Dragons grab April prize

REMEMBER in the April issue we asked you to design a frieze using Allen Plume's Frieze program?

The response was fantastic and the decision far from easy. You're a very talented lot! Eventually we decided on the winner and a SIR Computers printer/ADC interface is on its way to Byrnice Reeds of Washington, Tyne and Wear for her dragons design, which we reproduce on the left.

Electron User contest entry form

20.

Write down your picture's coordinates here:

Send your entry to Drawing, Electron User Contest, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY, to reach us not later than July 31, 1984.

THE GAME TO MAKE YOUR SKIN CRAWL

BUGBLASTER

THE ACTION PACKED HIT REWRITTEN FOR ELECTRON

Alligata presents a superb range of software products that are designed specially for you. Games that cleverly combine full machine code and high resolution, full colour graphics to create hours of fun and excitement. And utilities that have been developed to open new doors and help get the best from your Electron micro. If it's to be outstanding quality and amazing value for money then Alligata has to be your choice.

Send a stamped addressed envelope for our full colour catalogue which gives details of the complete range.

Land your moon buggy and rescue a precious cargo, destroying all opposition on the way; finding your way back to the mother ship start again against greater odds.

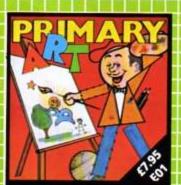

A superb action packed arcade special. A really fast implementation of the splendid 'centipede.' Features include spiders, mushrooms, centipedes and the mushroom poisoning scorpion affectionately known as 'Brian.' The better you get the faster the action. Nerve tingling excitement should keep you up all night!

Experience all the speed and excitement of the arcade spectacular

WRITE OR PHONE
YOUR ORDER TODAY!

also available from all good software stockists.

E05 Scribe II £9.95
Produce professional letters and documents, speedily and easily, with this superb word processing program—handling up to 2 A4 pages as one file. Simple to use, yet very powerful, Scribe II handles up to 600 lines of text with 80 characters per line screen display. Compatible with most printers.

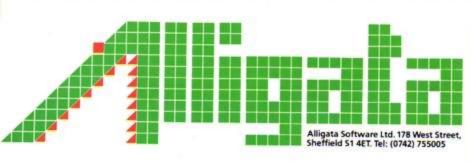

Create a picture to be proud of – place pre-programed shapes in any position, any size or any colour. Features free hand drawing and animation effects.

The fun-filled way to learn to tell the time. The combination of sound and simple display complement each other to produce a very easy to use teaching package.

Keeping your money in your pocket enjoy all the excitement of beating the one arm bandit

Despatch is normally made on receipt of order and should reach you within 7 days.

ELECTRON EDUCATIONAL SOFTWARE

Our educational software is used in thousands of schools and homes throughout Great Britain. Now available on Electron.

EDUCATIONAL 1

Hours of fun and learning for children aged 5 to 9 years. Animated graphics will encourage children to enjoy maths, counting, spelling and telling the time. The tape includes MATH1, MATH2, CUBECOUNT, SHAPES, SPELL and CLOCK.

'An excellent mixture of games'

Personal Software - Autumn 1983.

EDUCATIONAL 2

Although similar to Educational 1 this tape is more advanced and aimed at 7 to 12 year olds. The tape includes MATH1, MATH2, AREA, MEMORY, CUBECOUNT and SPELL.

FUN WITH NUMBERS

This program will teach and test basic counting, addition and subtraction to 4 to 7 year olds. The tape includes COUNTING, ADDING and an arcade type game to exercise addition and subtraction. With sound and visual effects.

FUN WITH WORDS

00.83

Start your fun with alphabet puzzle, continue your play with VOWELS, learn the difference between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of HANGMAN. Complete with sound and graphics. The tape includes ALPHA, VOWELS, THERE, SUFFIXES and HANGMAN.

'Very good indeed' . . . A&B Computing - Jan/Feb 1984

JIGSAW AND SLIDING PUZZLES

There are 2 jigsaws and 4 sliding puzzles on a 3 x 3 and 4 x 4 grid. Each program starts off at an easy level to ensure initial success but gradually becomes harder. It helps children to develop spatial imagination and in problem solving. The tape includes 6 programs: OBLONG, JIGSAW, HOUSE, NUMBERS, CLOWN and LETTERS,

NOW AVAILABLE FOR THE electron

THE SIR COMPUTERS

PRINTER/SWITCHED JOYSTICK INTERFACE

COMPLETE JOYSTICK & PRINTER FEATURES INCLUDE:

JOYSTICK FACILITIES

- Provides connections for two standard Atari-type joysticks, allowing the use of two-player games.
- Immediately compatible with all games offering a joystick option.
- Extra commands allow joysticks to be defined as any combination of keys, allowing all keyboard-operated games to be used with joysticks.
- Joysticks may be read directly from BASIC using the ADVALINI function.

PRINTER FACILITIES:

- Provides connections for a standard Centronics type printer.
- Allows use of all BBC Microcomputer printer control commands.
- Special command enables a graphics screen to be copied to any Epson dot-matrix printer.

ADDITIONAL SPECIFICATIONS:

- Only Acorn-approved memory locations are used, ensuring complete compatibility with any future devices (sideways ROM/RAM, sound expansion, speech synthesiser, disc system etc.)
- * All operating software is held within a paged ROM and is available for use from the moment the computer is switched on. THERE IS NO NEED TO LOAD ANY ADDITIONAL SOFTWARE FROM CASSETTE.
- Housed in a sturdy plastic case.
- * Full twelve month guarantee.
- * Available direct from SIR COMPUTERS for only £44.95 (inc. VAT). POSTAGE & PACKAGING FREE Please allow 28 days for delivery

SIR COMPUTERS – 1st for electron support

All our prices are inclusive of VAT and postage/packaging. We also stock a complete range of printers, monitors, disc drives and software - with many hard-to-beat prices. Please telephone us for details.

Access/Barclaycard Telephone orders welcome.

SIR COMPUTERS LTD.

91 Whitchurch Road, Cardiff CF4 3JP. Telephone: Cardiff (0222) 621813

Also available for the Electron THE SIR ADC/PRINTER INTERFACE

NOT JUST ANOTHER JOYSTICK PORT - FULL ANALOGUE TO DIGITAL CONVERTER provides fully proportional control, essential for use with graphics packages, digitizers, etc. ideal for scientific & educational applications: usable with a wide variety of BBC Micro-compatible analogue and switched Joysticks/Paddles

CENTRONICS PRINTER INTERFACE - allows use of a wide variety of parallel printers including entire Epson range, complete firmware support included.

HIGH QUALITY MOULDED CASE - attractively styled plastic onit bolts securely to the back of the computer

EASY TO FIT - no soldering, simply plugs straight into computer's rear edge-connector and is held in place by twin bolts, edge-connector on back of unit provides for further modular expansion if necessary

THE SIR ELECTRON PRINTER ADC INTERFACE £65.95

THE SIR ROM/RAM EXPANSION BOARD

Provides 12 extra sockets which support a variety of ROM and RAM configurations up to a max of 192K for ROM and 16K for RAM

ROM and RAM is normally paged in 16K blocks but is easily switchable to 2K, 4K or 8K blocks.

Easy to install - just plugs in.

Professional styled casing bolts to rear of computer.

Fully buffered design.

Permits use of most BBC ROM-based software including utility ROMs, wordprocessors & languages.

How to keep tabs on those cheques

IN these days of ever increasing bank charges it pays to keep an accurate check on your cheque book. This program will help you do just that.

Bank Account is a simplified version of the spreadsheet programs written for much larger machines.

It allows you to keep tags on your account, update the balance, list all cheque entries together with their numbers and amend any account errors you may find.

After setting mode, error clearance and other instructions in lines 10 to 130, lines 140 and 150 dimension the various arrays used and set up all the variables for the main program.

Lines 160 to 280 contain the main program, successive procedures centred around the entry FOR ... NEXT loop allowing 200 entries.

Be one of the first to get each issue

A subscription will ensure you get your own personal copy HOT OFF THE PRESSES month after month for the next year.

Every owner of an Electron - and everyone thinking of buying one - needs to get Electron User every month. It's the brightest, most authoritative yet completely independent guide to a machine that has so much potential you will never tire of reading about its remarkable capabilities.

You can buy Electron User from your local newsagent or station bookstall. Or you can take out a 12 months subscription and have it delivered to you by post.

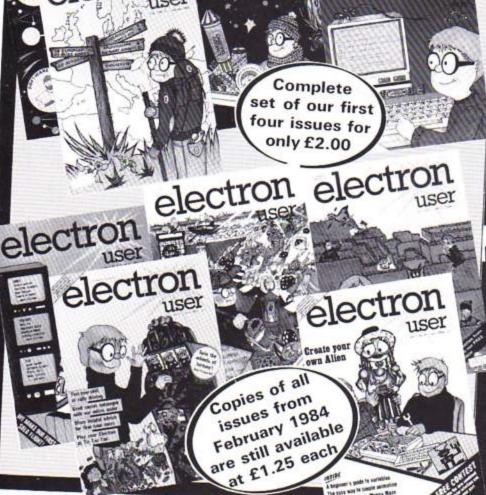

£3.95

Your Electron needs

Keep your collection of Electron User complete with these handsome binders

Bound in attractive red pvc with the Electron User logo in gold blocking on the spine, this binder will hold 12 magazines firmly secured in place by metal rods. £3.95

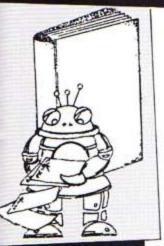

FREE Cassette worth subscribe NOW!

If you take out a subscription to Electron User now you will receive completely free one of the monthly cassettes of Electron User listings. Choose which one you want from those illustrated below.

This free gift is for a limited period, so subscribe now!

All prices include postage, packing and VAT, and are valid to July 27.

GAMEMAKER 2

Make your games come alive with multi-coloured shapes and characters. Arcade quality high-speed games are yours if you have an Electron, the ability to write BASIC programs and GAMEMAKER 2.

Design your own: Flying Ships Walking Men **Chasing Monsters** Flashing Eyes **Beating Wings**

Control them with simple commands, e.g.

*GM left 1 *GM up 1

*Easy to use menu style

*32 shapes each with 2 images

*48 possible images

*Different sizes — max. 16 x 24 pixels

*Naming facility for library usage

*Tape save and re-load

*Simple commands from BASIC

*Variable movement speed

«Collision detection with other shapes

*Variable animation speed

Name prompter via f1 key

*Low memory usage

Become an ELECTRON GAMEMAKER 2 Send the coupon below for your copy Price includes postage, VAT and our guarantee.

£12.99

To: **HOLLY** Computers Ltd PO Box 17

Bingley West Yorkshire BD16 3JJ

Please send me _____ copies of GAMEMAKER 2.

I enclose £ ____ in payment.

PLUS many thousands of software programs – games, educational and business packages.

There's much more to summer we go to a new us much more room to

Alexandra Palace, London N22. Thursday

- SEE the latest software hundreds of new games, educational and business programs.
- SEE all the latest add-ons never before have so many exciting new peripherals been launched.
- SEE all the latest techniques and get free advice from our team of experts, writers and programmers.
- * Make a note in your diary NOW!

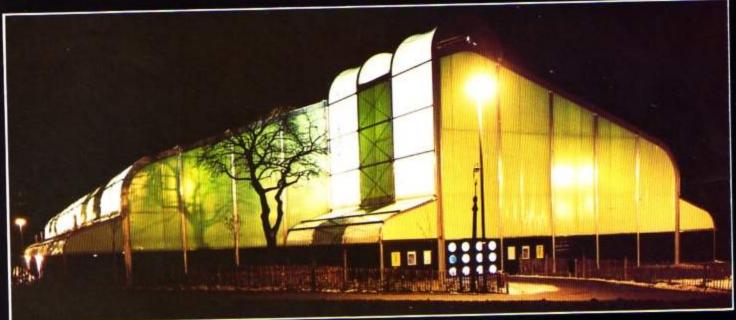

You must see for yourself all the rapid developments in the ever-expanding world of the Electron and BBC Micro!

show. So this home – to give show it all.

to Sunday, July 19 to 22

Reduced prices for School/College Groups

Entry only £1 per student if bookings are made in advance. Send your cheque (made payable to Database Publications) and SAE to:

Electron & BBC Micro User Show 68 Chester Road, Hazel Grove Stockport SK7 5NY Tel: 061-456 8383

Valid for a minimum of 10 people

SAVE MONEY with our Special Travel and Hotel Offer

Visitors to the Show can obtain cut-price rail tickets from ANY station in the United Kingdom - plus special reduced prices at London hotels.

For full details write to:

Travel Offer, P.O. Box 1, St. Albans AL1 4ED with SAE or Telephone: St. Albans 34475 quoting: The Electron & BBC Micro User Show.

This voucher is worth £1 per head

By handing in this voucher at the door you save £1 off the normal admission price of £3 (adults) and £2 (children).

(Valid for a maximum of 4 people)

10am - 6pm, Thursday, 19July

10am - 6pm, Friday, 20 July 10am - 6pm, Saturday, 21 July

10am - 4pm, Sunday, 22 July

Alexandra Palace Wood Green, London N22.

Number attending: 1 2 3 4

Chart your progress

- in 3D

CHARTIST is a short but very effective program from JON WILLINGTON of Hereford.

It processes information supplied by the user and displays a colourful threedimensional bar chart.

When you run the program it asks you for the title of the graph and a label for the y axis.

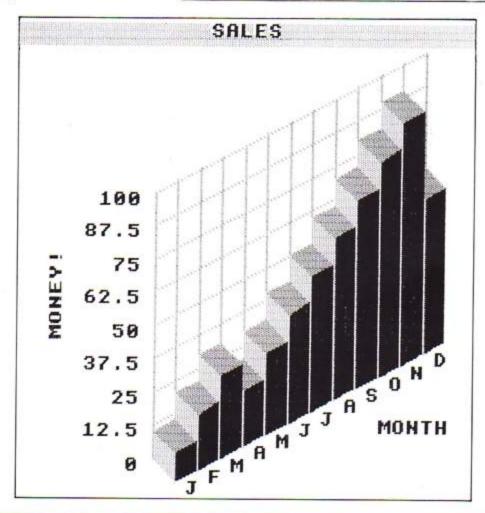

Then you put in your figures for each of the 12 months of the year.

The Electron next prints out a 3D coloured bar chart, showing graphically what has happened over the year.

The program is constructed as shown on the right.

KAY-ESS

COMPUTER **PRODUCTS**

PROFESSIONAL PROGRAMS FOR THE MODEL B AND ELECTRON

NEW LOW SUMMER PRICES EACH TAPE ONLY £5.95

If you enjoy the idea of creating your own user defined characters but are put off try the time consuming mathematics, then DESIGN is for you! DESIGN lets your imagination loose by letting you draw your characters, in all 16 colours, on an 8 s 8 gnd leaving all the hard work to the machine. DESIGN's features include being able to recall multiple characters for re-editing and displaying VDU 23 commands. All characters used in KAY-ESS programs are created using DESIGN.

SPACE TRAFFIC CONTROLLER - NEW BHE

As a space traffic controller you have been stationed at the main robot cargo port of the planet Ore 7. It is your job to get the robot spacecrafts down in one piece. As your confidence increases you can increase the number of crafts allowed withing your control area. Warning not to be played after a hard or hectic day!

SPACE TANK (B)
After your SPACE TANK has landed on the planet Orion, a series of alien tanks surface hoppers, and spacecrafts will attack. How long can you hold out commander? This game makes use of the Beets's fast scrolling ability. Can be used with either keyboard or joysticks. Top ten table. Pause option.

HORSES (B)(E)

Come on now, don't be shy, choose one of the six horses and let's see what you can de. How many of the fences can you complete at the Orion arena, especially with the clock ticking away? New riders can try one of the more docide horses, while others may like to risk one of the more lively beasts! Can be used with either keyboard or joysticks. Too ten table. Pause option.

STAR HAWKS BHE

Can you stop the STAR HAWK5 before they stop you? Slow work means the generation of more laser firing mutant hawks. Based on the games of Galaxian and Gorf. Can be used with either keyboard or juvsticks. Top eight table. Pause option.

HANGMAN (BILE)
Let words become fun again with our three language. (ENGLISH, FRENCH, ITALIAN), version of the popular game of HANGMAN. There are 3 levels of play for each language. All words can be replaced or removed, and new ones can be added. HANGMAN comes with an instruction program giving full details for parents and teachers. Once running prying eyes cannot access the word lists!

EARLY YEARS (BITE) For children between 3-6 years of age. These two packages give an adult or older child a means to take a younger child through a series of simple game type tasks to enforce idea's. The emphasis is on learning through fun. Topics covered include subtraction, addition, recognition, colour, shapes, sizes, sounds/notes, co-ordination, distances, estimates, directions.

EARLY YEARS 1

A! MICKEY THE MONKEY and his apple tree make subtraction fun.

B! COLOUR BLOCKS bring sizes and colour into perspective.

C! MERRY MUSIC turns the keyboard into a musical keyboard.

D! FUNNY FACES presents a line up which one is the suspect?

E! FRED THE FROG needs cu-gridinated help to get across the pond.

A) THE POND seems very active today

B) SPEED is required to keep the cake on the conveyor belt.

C) DIRECTIONS seem to be needed by everyone in Orion village.

E) SID THE SPIDER needs some help to get out of the maze

All prices are FULLY inclusive for UK orders. Please add £1 per tape for non-UK addresses. Cheques P.O.'s should be made payable to KAY-ESS Computer Products.

ELECTRON PROGRAM CAN BE USED WITH FIRST BYTE JOYSTICK INTERFACES

Watch out for special KAY-ESS double sided tapes at local dealers.

Dealer enquiries welcome.

KAY-ESS computer products previously traded under the name of DRION SOFTWARE.

Available for: (E) Electron (B) BBC Model B FREE with all orders is our 3 level version of NOUGHTS AND CROSSES!!! KAY-ESS Computer Products, 11 Buttercup Close, Romleighs Park, Harold Wood, Essex RM3 0XF.

NOW AVAILABLE ON THE ELECTRON D.A.C.C.'s SPRITE - GEN Runs in 4 colours Mode 5 PRICE £9.95

The BBC version of this highly successful package has won a nomination in the 1984 British Micro Computer Awards.

Write your own 'Arcade Action' games with D.A.C.C.

Sprite-Gen

mate your SPRITES with individual movements such as "a man alks", "a bird that flaps its wings", "invaders that pulse sply", the possibilities are endless! When you own the SPRITE ATOR package you have access to every sort of high-speed on technique you need. Buying expensive machine-code games come a thing of the past. Look at the following impressive list of you can access from your own BASIC programs ...

- Up to 32 SPRITES on screen at any time.
- Limitless SPRITE design using the SPRITE Generator program included in the package, allows ALL SIXTEEN logical colours "in each SPRITE" if desired. Full operating system capability of logical/actual
- ore can be up to EIGHT different SPRITE DESIGNS active at one ne, each of which can have up to THREE "CLONES", (copies of the mary SPRITE but each with individual movement control).
- Each SPRITE actually has TWO images which will achieve the animation effects when the typu choose, give the two images totally diffhave created two SPRITES out of one, usal technique can also be applied to the CLONES SPRITES can be animated, multi-coloured, in
- d-based generator utility, they and the high speed ode routines that control their movement are secreted into the BASIC system is ready to accept your own program gly which you can direct the SPRITES to appear, move, or just remain stationary, with the simplest commands you
- SPRITES can be linked together in pairs or groups to produce large scale animation. Of course, if you wish they can be as small as a
- own creations can move in front of each other with no loss of

SPRITE-GEN is supplied as a package containing:

- *** Sprite-Generator program

 *** Two fast-action demonstration programs

 *** Sprite-Gen control routines
- - Illustrated user manual with examples and listings
 All for only £17.95 (pp and VAT included).

THE BEST ADD-ON FOR YOUR ELECTRON

Frustrated by the Electrons inability to connect to a printe

Hard copy is of great assistance when debugging the longer program, and is of enormous value in any educational situation.

At last a straightforward, economical and easy to use interface to drive most parallel (Centronics) printers is available now . Epson, Seikosha . etc.
Unlike some other interfaces appearing on the market, this module is completely self

contained and does not require cassette based software to be loaded each time the printer is to be used.

Just plug in and use. Obeys all BBC commands . . (*FX6, VDU1, VDU2, VDU3, etc.). This modular interface measures only $\frac{1}{4}$ " x 2" x 4", is entirely self contained and attaches simply and safely to the rear of the Electron. Absolutely no soldering or technical ability required to fit

BBC leads available from ... £7.95

If you already own the popular game of Killer Gorilla, then 'Killa'

will provide:

15 levels of play (BBC) 7 levels of play (Electron), variable extended jump, climb and jump with hammer, extra lives after 25, 50 & 75 metres, practice mode, pause facility.

'MONSTAS' THE UPGRADE

If you already own the popular game 'Monsters'* then 'Monstas'

4 skill levels, variable extended jump, conveyor belt effects, user defined keys, configurable monsters, extra lives after each frame. and pause.

Both programs available for Electron or BBC State which machine.

£2.75 each + 50p p&p or £4.50 for both + 50p p&p BIT TWIDDLERS,

Dept. EU/6, 158 Church End, Harlow, Essex CM19 5PF Monsters is a trademark of Acornsoft.

C15 COMPUTER

- Quality computer cassettes
- Leaderless tape
- Screw construction
- Plastic library case
- Approved by leading software house

Box of 10 . . . £3.50 + £1 p&p

Cheques, P.O.'s to:

HAYSTACK PERIPHERALS 5 Church Road, Greenfield. Oldham OL3 7LO.

BET AN ANGLE ON GEOMETRY

FED up with figuring things out the hard way? Don't worry, RICHARD RENNIE's program Formulae will make things easy for you.

Want to know the volume of a sphere or the area of a triangle? Trying to get an angle on a cosine? It couldn't be simpler!

All you do is run Formulae, reply to the questions the Electron will ask and you'll be given the answer you want.

EPIC ADVENTURES

FULL-SCALE MACHINE CODE ADVENTURES FOR THE BBC AND ELECTRON

OUR AMAZING NEW ADVENTURE IS NOW AVAILABLE

THE WHEEL OF FORTUNE

They said it couldn't be done on the Beeb - but we've done it!

The Wheel of Fortune is a classic puzzzle adventure, with 250 locations, and brings the following advanced features together for the first time:-

* Sophisticated language and speech interpreters capable of accepting single or multiple commands, up to 254 characters in length. Complex multiple commands are phrased just as you would speak them.

Moving characters with varying moods. These characters remain active whether you type anything or not. Their reactions to you will depend upon the way in which you have previously treated them. The speech interpreter allows you to talk to them, to either give them commands or information, or to ask them questions.

 Instant half-screen teletext graphics for each location (BBC only). These remain on screen with the text and both may be studied simultaneously. The graphics may be switched on or off, as required.

You may save your position on tape OR DISC, using a different filename for each position.

Up to 10 commonly-used command sentences can be stored and called up as required.

The stored sentences may be changed during the game.

* No frustrating illogical mazes * Humorous character behaviour * Scoring * Fast response * Fully disc compatible * Etc. Etc.

This masterpiece of programming is available for BBC or Electron (state which) for only £9.95 Also available are our 3 popular text adventures. Each has approx. 230 locations and costs just £7.95 1) Castle Frankenstein 2) The Quest for the Holy Grail 3) The Kingdom of Klein P&P FREE it ordering Z or more games, otherwise add 50p

SENIOR SCHOOL EDUCATIONAL PROGRAMS

Developed in schools and now available to interested home micro users. Research has identified the compulsory exam topics, and professional programmers have coded these into exciting educational games which have been proven to effectively teach and entertain.

Now available for BBC B and ELECTRON. Each pack contains main program, extra self test program and Core Facts book for only £11.95 or any two for £19.95.

MATHS 1: TRY-ANGLES

MATHS 2: COORDINATES

PHYSICS 1: ARCHIMEDES

PHYSICS 2: ISAAC

GEOGRAPHY 1: MAYDAY **GEOGRAPHY 2:** WEATHER

Draughts style teaches angles ratios, tan, sin, cos. 25 levels

Battleship style teaches x and y in four sectors, directed numbers

Submarine style teaches Archimedes Principle, pressure and upthrust

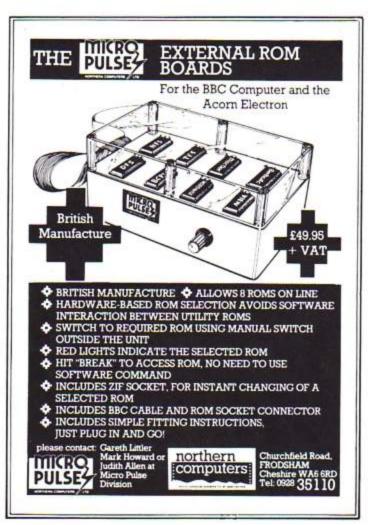

Gunnery style teaches mass, weight Newtons Laws and

projectiles

Orienteering style teaches O.S. symbols, grid references, bearings Forecasting style teaches symbols,

pressure systems, synoptic charts

BBC/ELECTRON ADVENTURES

NEW WOODLAND TERROR £7.48 (CASS) £10.50 (DISC)

The sequel to FIRIENWOOD, many years ago an intrepid adventurer embarked on a quest for the Golden Bird of Paradise. Although successful, our hero released a sinister force which now lurks within the enchanted wood. Your mission is to return the terror to its original resting place and restore peace to an unhappy land 11 This is a complete game, knowledge of Firienwood is not required.

FIRIENWOOD £7.48 (CASS) £10.50 (DISC)

An evil wizard has captured the magic golden bird of paradise and imprisoned it in a weird castle in the middle of the enchanted Firienwood. Your quest is to find the bird and set it free, in return the bird will give you health and prosperity. BEWARE! many perils lie before you and every move is fraught with danger!!

BLUE DRAGON £7.48 (CASS) £10.50 (DISC)

Somewhere in a strange and dangerous land lies a fabulous treasure guarded by a fierce dragon. Can you survive the perils that await and recover the treasure or will you meet a nasty end!! What is making terrible slurping noises deep underground and what use is the strange black cloud? Play the game and find out.

SURVIVOR £7.48 (CASS) £10.50 (DISC)

The year is 1910 you are sailing on a steamer bound for Borneo when there is an explosion and the ship sinks. Shipwrecked on a tropical island can you survive and escape back to civilisation, or will you end up in someones cooking pot!! There is more than one ending to this game, not all of them bad!

All the games are in machine code for fast responses and are text only. Please state which machine when ordering. Prices include VAT and postage within U.K. Cheques payable to MP SOFTWARE or write/phone with your ACCESS/VISA card No. Send S.A.E. for full range of programs and price list or ask your local dealer. Trade enquiries welcome.

We pay well for good original programs contact us today for more details.

Micro Messages

ONE day, while Beethoven was turning in his grave at my rendition of Fur Elise on my Electron - hampered by having mislaid the manual at the time - I went upstairs to have another root around.

Suddenly I became aware that the dulcet tones of my micro were being broadcast through my radio!

Much surprised I tuned it in and discovered it on several frequencies, the strongest being about 95 VHF.

Now I am aware that computers can cause interference but have never met this before. - T. Skinner, Caversham, Reading.

· We haven't come across this either. You're right in thinking that micros can cause interference but this is the first time we've heard of it actually broadcasting! Has any Electron user out there had any similar experiences or got an explanation?

Heads you win

I KNOW that this program is very simple but I am only 10 and I don't know too much about computers.

It's a program where the computer tosses a coin and,

WHAT would you like to see in future issues of **Electron User?**

What tips have you picked up that could help other readers?

Now's here is your opportunity to share your experiences.

Remember that these are the pages that you write vourselves. So tear yourself away from your Electron keyboard and drop us a line.

The address is: Micro Messages Electron User Europa House 68 Chester Road Hazel Grove Stockport SK7 5NY.

Day my Electron went on the air

depending which side the coin comes down, it prints heads or tails. When either heads or tails reaches 100 the Electron stops and prints out who won.

Helen Jones, Cheadle Hulme, Cheshire.

320 PRINT "HEADS HAS WON!"

 Thanks for the program. Helen. Not bad for ten years old. Here at Electron User we're wondering what your programming will be like at the ripe old age of 13.

410 PRINT "SOODBYE"

Petal patterns

420 END

READERS may enjoy this short program which produces patterns. Values of N in the range 2 to 10 give petals. Larger values like 50 give star patterns.

For small values of N it is interesting to compare the number of petals with N. noting the difference between odd and even values.

- R.M. Jones, Cheadle Hulme, Cheshire.

 An interesting little listing, Mr Jones. We notice that you share the same address as Helen - of the heads and tails program, Programs must RUN in the family!

Switched coordinates

IN the sixth paragraph of May's Program Probe, Nigel Peters says that to create a graphics window, VDU24 must be followed by the coordinates of the bottom left corner and then by those of the top left corner.

Shouldn't the second set of coordinates be the top righthand corner? - Christopher Jones, Cheadle Hulme.

 Quite right, Christopher, As it is, we have Nigel Peters walking round with a big red bow on his right wrist so he'll remember. Incidentally, you're not another of the Jones tribe are you?

Micro Messages

Handling that cursor

I HAVE noticed that some programs listed in Electron User have turned off the flashing cursor by different methods. One is using:

VDU23;8202;0;0;0;

the other being:

VDU23,1,0:0:0:0:0:

Can you please explain the difference? Also, having turned it off, how do you turn it on to enable the program to be edited? - Trevor Harley, Winchester.

 There is no practical difference between the two ways of switching the cursor off. The one with 8202 is just a left over from the early days of the BBC Micro. The Electron accepts it for the sake of compatibility.

To switch the cursor back on just use:

VDU 23,1,1;0;0;0;

or, in the case of the 8202, just change mode.

Triangular technique

AFTER reading the Eddietorial in the March Electron User, I decided to try my hand at writing a small display program on my Electron. After a while I came up with the following eight line program

which fills the screen with colourful triangles.

It uses the PLOT 85 command to draw a triangle on the screen.

The colour of the triangle is determined with GCOL 3.RND(16) which passes each bit of the random number through an exclusive OR gate with the bit pattern of the current background colour.

Although the RND function doesn't contain O, black is included in the random selection because the Electron defaults 16 down to 0, giving black. - Stephen Harrop, Cardiff.

10 REM COLOURFUL SCREEN

15 REM by Stephen Harrop

20 MODE 2

30 REPEAT

40 X=RND(1279)

50 Y=RND(1023)

60 GCOL 3, RND (16)

70 PLOT 85.X.Y

80 UNTIL FALSE

 Thanks for the program Stephen, it's nice to know that our editorials can inspire someone. Or is it just that you prefer programming to reading

Optional grids

WE GOT our Electron at Christmas and have found it very entertaining, but a great time waster.

I enjoyed Mike Cook's

"Quick on the Draw" program from the May issue of Electron User, Although not fully understanding the intricacies of the original, I have added a few extra lines of my own which give two optional grids.

They can be obtained as

X- gives an orthographic grid which helps accurately position lines and polygons.

I- gives an isometric grid which helps draw perspective

I have found that the best effect is obtained when white or green shapes are shown on a red grid, but from the program the option is yours.

In order to get a really universal program, I tried to incorporate a method of colouring in shapes but without success. Has anyone else managed to do it? If so, I would be interested.

The listing shows the lines that have to be added to the original program to produce the grids. - Pete Casebeto, Worthing, Sussex.

255 IF A\$="I" THEN PROCISOGRID

256 IF A\$="X"

THEN PROCORTHOGRID

2061 PRINT "I-DRAW ISOMETRIC

GRID*

2062 PRINT "X-DRAW DRTHD GRAPHIC GRID*

2500 DEF PROCISOGRID

2510 FOR X=30 TO 1260

STEP 150

2520 MOVE X.0

2530 PLOT 21, X, 1020

2540 NEXT X

2550 FOR Y=-400 TO 1020

STEP 96

2560 MOVE 0.Y

2570 PLOT 21,1260,Y+400

2580 NEXT Y

2590 FOR Y=0 TO 1500 STEP 96

2600 MOVE 0.Y

2610 PLOT 21,1260, Y-400

2620 NEXT Y

2630 ENDPROC

3000 DEF PROCORTHOGRID

3010 FOR X=0 TO 1260 STEP 100

3020 MOVE X.0

3030 PLOT 21, X, 1020

3040 NEXT I

3050 FOR Y=0 TO 1020 STEP 100

3060 MOVE 0.Y

3070 PLOT 21,1260,Y

3080 NEXT Y

3090 MOVE 0.0

3100 ENDPROC

 Many thanks, Pete, It's nice to hear of people who adapt and improve our programs. We haven't come across a method of colouring in shapes but no doubt, one of our readers will let us know.

Real killer

AFTER reading about the score of 106,300 on Killer Gorilla in the May issue of Electron User, I have written in to see if 116,800 is a record. -Robin Burnage, Holywell,

 We don't know if it's a record, but it's certainly a good

score and we admire your dedication.

TOP QUALITY SOFTWARE FOR THE ACORN ELECTRON

ACORN ELECTRON

The best version available for the Electron micro. Percy is trapped in an ice maze which is populated by the deadly Snobees. His only hope of survival is to squash them by hurling ice cubes at them. Unfortunately, whenever it seems that he has wan, a deadlier breed appears. Hi-score, rankings, excellent graphics and sound. NEW RELEASE

From the author of Percy Penguin, Mr. Wiz is a fast-action multi-scene game. Guide Mr. Wiz around the garden to eat the chemies whilst around the garden to eat the chemes unjust avoiding the evil gremlins. The gremlins can be killed by dropping apples on them or by throuling the crystal ball. Extra points can be gained by eating the magic mushroom, but besurer, this is the home of the gremlins and makes them permanently furious! Sound effects and tunes, hi-score, rankings. Superb provides hills action. arcade-style action. NEW RELEASE

A highly versatile implementation of Chess. Play black or white against the computer or a human apparent. The skill level of the computers play can be varied wirdly, and moves are entered either by co-ordinates, cursor control or joystick control. Moves can be taken back if an error has been mode, and the leader of the modified of tow large. General board can be modified at any time. Games can be "saved" or "loaded", and the last game can be replayed. The computer will, if requested, suggest your moves.

The centibury descends from the top of the screen weaving intimidatingly between the mustrooms. Your objective is to shoot oil the segments of the centibury before it reaches the bottom of the screen. Features include spiclers, snails, flies, a skill levels, hi-score, rankings, and increasing difficulty.

A novel and unusual program. Arcade-action with this exciting multi-stage shooting game. The objective of the game is to shoot the aliens out of their "baxes" before the "baxes" fill up. Once full, the aliens fill down relentiessly, exploding as they hit the ground. The game features include: 6 skill levels, rankings, hi-score, increasing difficulty.

An adventure game using hi-resolution ful-colour graphics. You are stranded on a stronge planet, and your mission is to return to civilisation and home. Many of the locations are shown graphically, including the spaceship, the diffs, the mountains, and (if you succeed) your home. You must corefully explore your environment searching for hidden clues to help you in your quest. explore your environment searchir hidden clues to help you in your quest. NEW! RELEASE

This program covers 1 56 countries which are divided into 8 categories of difficulty. Each country is pinpointed on an accurate hiresolution screen map of the world, and the user is asked the capital and or population. Bit the end of the test, the percentage of cornect answers is given, so that the student can monitor his geographical knowledge.
